

# WICANDERS WISE

## Three Season Rooms

## Three Season Rooms

Wicanders Wise is not suitable for Three Season Rooms.

- 1. Specific Temperature and Humidity Requirements:** Wicanders Wise cork flooring products are designed to function optimally within a temperature range of 65°F to 82°F and a relative humidity range of 35% to 65%. These conditions are crucial for maintaining the integrity and appearance of the flooring.
- 2. Comparison with Three Season Installations:** The industry standard for three-season room installations permits a broader temperature range (32°F to 100°F for floating floors) and does not require the same level of climate control. This broader range does not align with the more stringent requirements of Wicanders Wise Cork Flooring.
- 3. Risks Outside Recommended Conditions:** Installing these cork flooring products in environments that do not consistently meet these temperature and humidity specifications could lead to potential issues such as warping, expansion, contraction, or other forms of damage.
- 4. Clarification on Acclimation:** While the acclimation of the material is not required for three-season installation, maintaining a stable, controlled climate is essential for the longevity and performance of Wicanders Wise cork flooring.

To ensure customer satisfaction and the longevity of the flooring, these specific requirements must be clearly communicated to potential buyers, especially those considering installations in spaces that may experience broader temperature and humidity fluctuations typical of three-season environments.
