

charity: water MAP Framework Indicators

charity: water collects program indicators on the themes of water access, water quality, sanitation, hygiene, and WASH management. These indicators are measured at communities, water points, households, and schools. The full list of program indicators is listed below, by measurement location and theme.

Community Indicators

THEME	INDICATOR
Sanitation	% of communities certified Open Defecation Free (ODF)
Management	% of communities with an operational WASH committee or Private Operator
	% of communities where WASH committees report having financial savings

Water point Indicators

THEME	INDICATOR
Water access	Median number of users per water point
	Median reported time to repair last water point breakdown (days)
	% of constructed water points with water available on the day of visit
	% of constructed water points fully functional on the day of visit
Water quality	% of water points with no detectable <i>E. coli</i>
	% of water points with high diarrheal disease risk water (<i>E. coli</i> >100 MPN/100 mL)

Household Indicators

THEME	INDICATOR
Water access	% of households reporting using an improved water point year-round
	% of households reporting their primary water point is reliable (has no seasonal shortages, and shutdowns are communicated)
	% of households reporting water has been available from their primary water point every day within the previous two weeks.
	Median distance from households to primary water point (Major Review) or median distance from households to the charity: water funded water point (PIM) (meters)
	Median per capita volume of water collected by households (L/person/day)
	Median household water collection time per trip (minutes)
	% of households reporting the charity: water funded water point as their primary water point
Water quality	% of households with no detectable <i>E. coli</i> in water used for drinking
	% of households with high diarrheal disease risk water (<i>E. coli</i> >100 MPN/100 mL) used for drinking
Sanitation	% of households that have any latrine or toilet observed
	% of households with usable sanitation facilities on the day of the visit
	% of households that report practicing open defecation
Hygiene	% of households with handwashing aid (soap or ash) and water available for handwashing on day of visit
	% of household respondents that can name at least 3 critical times to wash hands

School Indicators

THEME	INDICATOR
Water access	% of schools with access to an improved water point on plot
	% of schools reporting their primary water point is reliable (has no seasonal shortages, and shutdowns are communicated)
Water quality	% of schools with no detectable <i>E. coli</i> in water used for drinking
	% of schools with high diarrheal disease risk water (<i>E. coli</i> >100 MPN/100 mL) used for drinking
Sanitation	Median number of students per latrine seat or stall at schools
	% of schools with gender-segregated improved sanitation facilities available
	% of schools with usable sanitation facilities on the day of the visit
	% of schools with facilities to manage menstrual hygiene needs
Hygiene	% of schools with hand washing facilities available
	% of schools with hand washing aid (soap or ash) and water available for handwashing on day of visit
Management	% of schools with available funds for WASH needs
