# Step-by-step tutorial

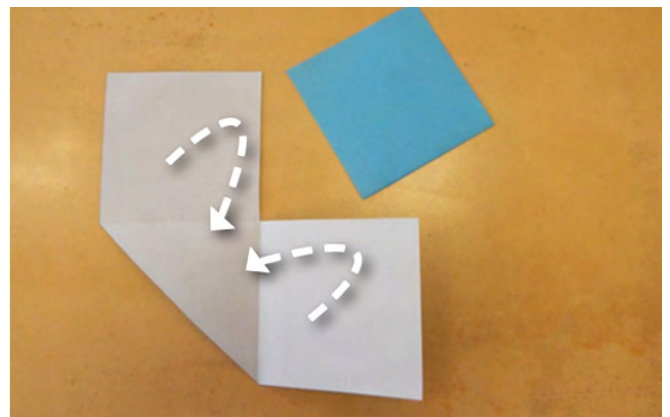

1

First fold the paper once in the middle, then unfold it again and fold once more in the other direction, to create four equally sized squares.

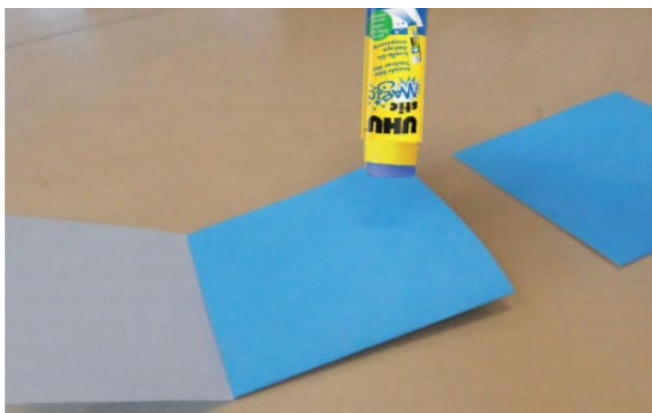

2

Now cut one of the folded rectangles out. If using paper that is printed on one side, the small, cut-out square will be required later.

3

Cut the corner off at the opposite end.

4

Then fold one of the remaining squares inwards and glue the other square using the UHU stic.
