

How To Use OpenSea: Beginner's Guide To The NFT Marketplace

[OpenSea](#) is the world's largest NFT marketplace. It allows enthusiasts to buy and sell non-fungible tokens of all kinds – art, music, documents, collectibles, domain names, and a lot more.

Rangers FC will be using this very platform to distribute the rare, unique, beautifully crafted [1,111 Champion Collection NFTs](#) that will come in different shapes and forms.

As such, we thought it would be useful to provide our fans with a guide on how OpenSea works and how to use it for our upcoming NFT drop.

Wallet Set-up

First, you will need a crypto wallet to participate in the marketplace. For this demonstration, we will use one of the most popular choices today; MetaMask.

We will now go to the Metamask website, [metamask.io](#). Then click > **Download** > **Install MetaMask for Chrome**

This data is aggregated and is therefore anonymous for the purposes of General Data Protection Regulation (EU) 2016/679. For more information in relation to our

It is time to create a password for your crypto wallet. The password must be at least 8 characters long. After writing it down, check the box below to agree with the terms and conditions, and click > Create.

This will be a password for just the device you are currently on - the most important thing is the seed phase that MetaMask will generate for you.

METAMASK

What is a Secret Recovery Phrase?

Your Secret Recovery Phrase is a 12-word phrase that is the "master key" to your wallet and your funds

How do I save my Secret Recovery Phrase?

- Save in a password manager
- Store in a bank vault.
- Store in a safe-deposit box.
- Write down and store in multiple secret places.

Should I share my Secret Recovery Phrase?

Never, ever share your Secret Recovery Phrase, not even with MetaMask!

If someone asks for your recovery phrase they are likely trying to scam you and steal your wallet funds

You will now see a field with your already generated secret recovery phrase. Click on it to reveal the words and write them down somewhere for future use. Screenshots are not recommended as they can easily be lost. Then click > **Next**.

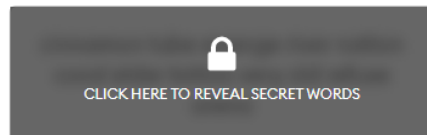

< Back

Secret Recovery Phrase

Your Secret Recovery Phrase makes it easy to back up and restore your account.

WARNING: Never disclose your Secret Recovery Phrase. Anyone with this phrase can take your Ether forever.

Remind me later

Next

Tips:

Store this phrase in a password manager like 1Password.

Write this phrase on a piece of paper and store in a secure location. If you want even more security, write it down on multiple pieces of paper and store each in 2 - 3 different locations.

Memorize this phrase.

[Download this Secret Recovery Phrase and keep it stored safely on an external encrypted hard drive or storage medium.](#)

Congrats! You have successfully set up a MetaMask crypto wallet. Now click > Next.

Congratulations

You passed the test - keep your Secret Recovery Phrase safe, it's your responsibility!

Tips on storing it safely

- Save a backup in multiple places.
- Never share the phrase with anyone.
- Be careful of phishing! MetaMask will never spontaneously ask for your Secret Recovery Phrase.
- If you need to back up your Secret Recovery Phrase again, you can find it in Settings -> Security.
- If you ever have questions or see something fishy, contact our support [here](#).

*MetaMask cannot recover your Secret Recovery Phrase. [Learn more](#).

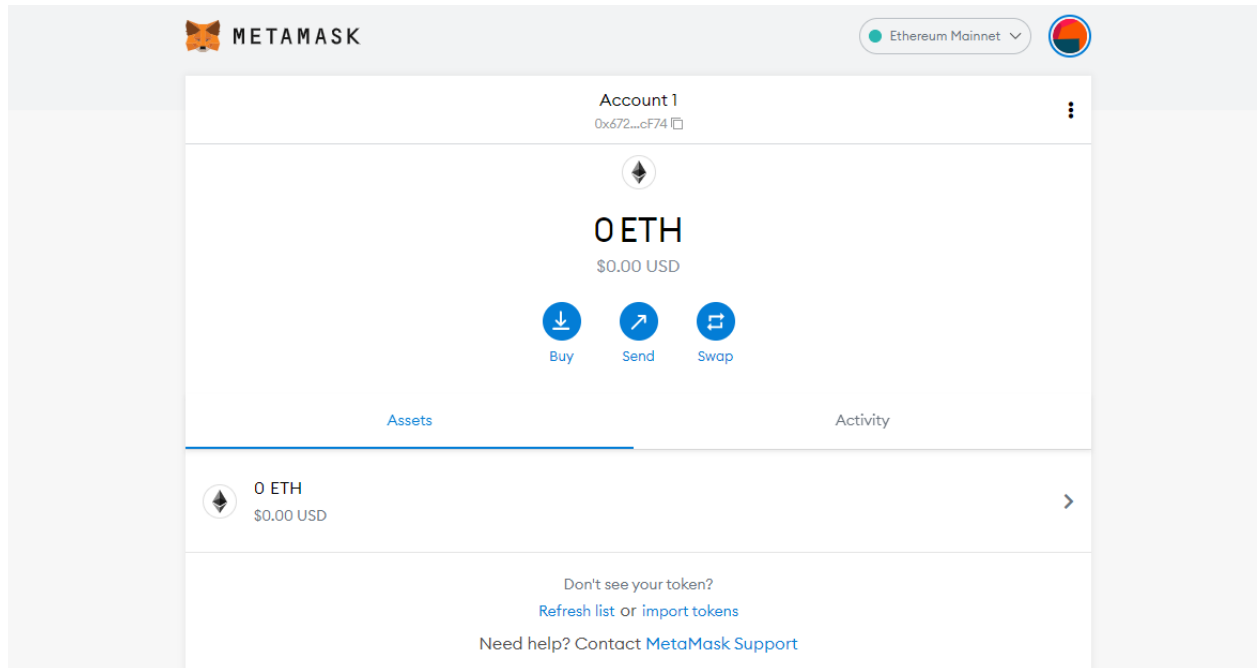

All Done

MetaMask - Google Chrome

You should now see the entire interface of your wallet with **buy, send, swap** buttons and your wallet address above the ETH balance.

In the assets field, you are shown the tokens you own, including non-fungible ones.

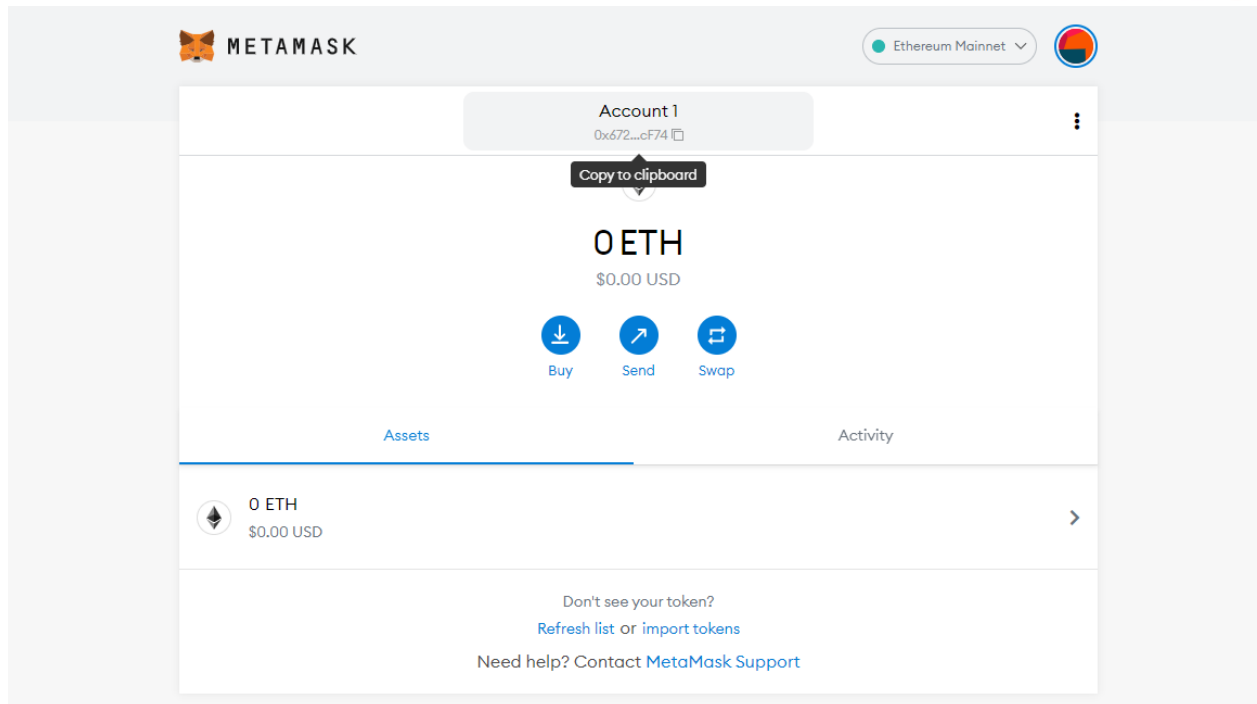

On the header, you will see dropdown buttons: one for the network you want to use, another – for your account settings (creating, adding accounts, connecting to physical wallets).

In the network dropdown, you should see Ethereum Mainnet, which is what we want. No need to worry about the others right now.

Getting Ethereum To Your Wallet

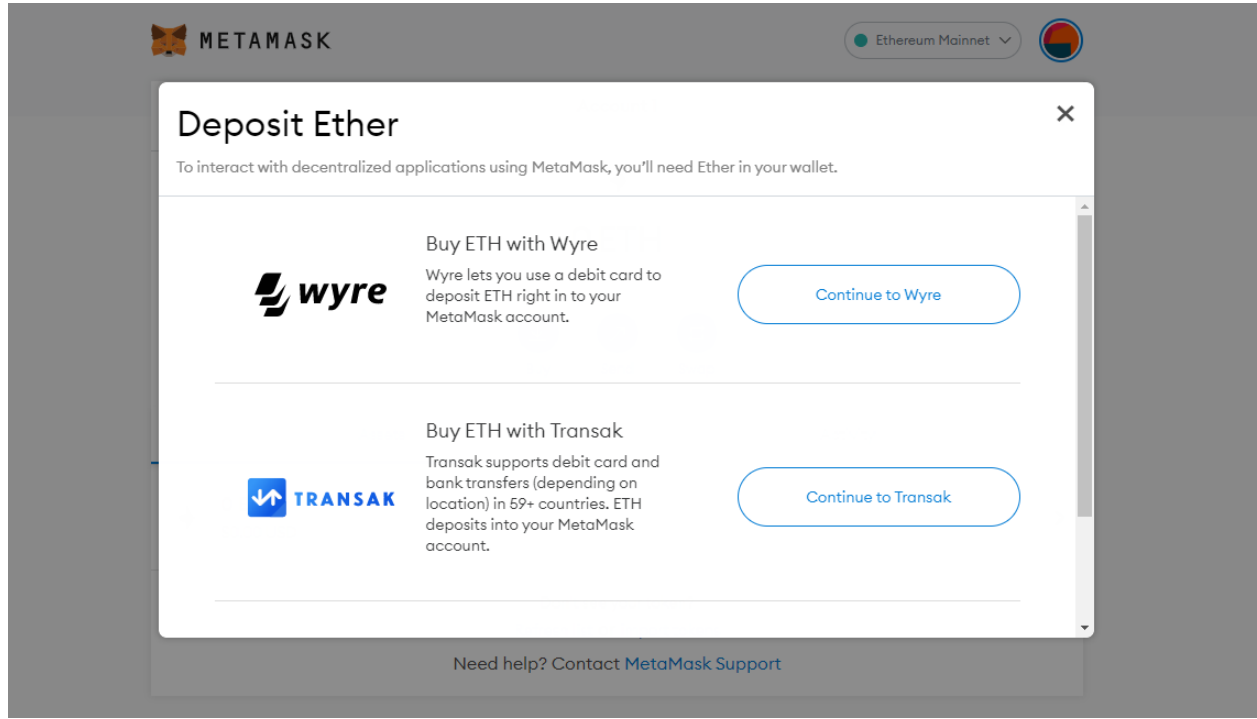

If you already have a wallet with ETH elsewhere, like *Coinbase*, *Trustwallet*, or some other platform, you can just click on your MetaMask wallet address located above the balance to copy it and send your Ethereum to that address.

If this is your first wallet, or you simply want to buy Ethereum directly on MetaMask, good news – you can do that too! Just click on the > **Buy** button on your wallet page, and you will see three options: Buying through *Wyre*, *Transak*, and *Direct Deposit* (sending ETH from another wallet).

There is not much difference in which service you're using as they are both trusted.

However, if you decide to go with Wyre, click > **Continue with Wyre**.

You will now be redirected to Wyre's interface where you can choose a sum you want to deposit, what currencies you want to use, a payment method, and you will also see all the network fees with the total purchase cost.

After setting the sum and other parameters, making sure everything looks fine, check the box below to authorize Wyre to process the payment, and click > **Next**.

You should now be set with your deposit and have Ethereum traveling to the MetaMask wallet. On average, it takes 3-5 business days for the funds to settle.

Should you decide to go with Transak, the bank processing times will differ based on your currency country and payment method.

Click > **Continue to Transak** if you want to go forward with it.

Now you will see a new window where you can set a sum and a payment method. Enter the details, choose to pay either with a card or do a bank transfer, and click > **Buy Now**.

Guide To OpenSea

We will now learn how to use the non-fungible token (NFT) marketplace called OpenSea, which you will find by going to opensea.io.

On the platform, it is possible to buy NFTs at a fixed price or at an auction. Here we will go through both.

As soon as you land on OpenSea, you will see buttons for exploring and creating (minting) NFTs on the website. But first, we need to connect the MetaMask wallet to the marketplace in order to set up an account on OpenSea.

To do that, you'll need to click the round **avatar button** located on the top right of the page.

You will now see different wallet options for connecting to OpenSea. Because you have just set up a MetaMask wallet, click on the first option.

Connect your wallet.

Connect with one of our available [wallet](#) [i](#) providers or create a new one.

MetaMask

Coinbase Wallet

WalletConnect

Fortmatic

Show more options

A small new window should now pop up on the right of your screen. Make sure the right account is selected in the field and click > **Next**.

Single Items ▾

Recently Received ▾

You are now set! Click > **Explore** to see a wide variety of non-fungible tokens and filter them in the left sidebar, type your query for specific things in the search field on the header (you'll be able to find the Rangers FC collection this way).

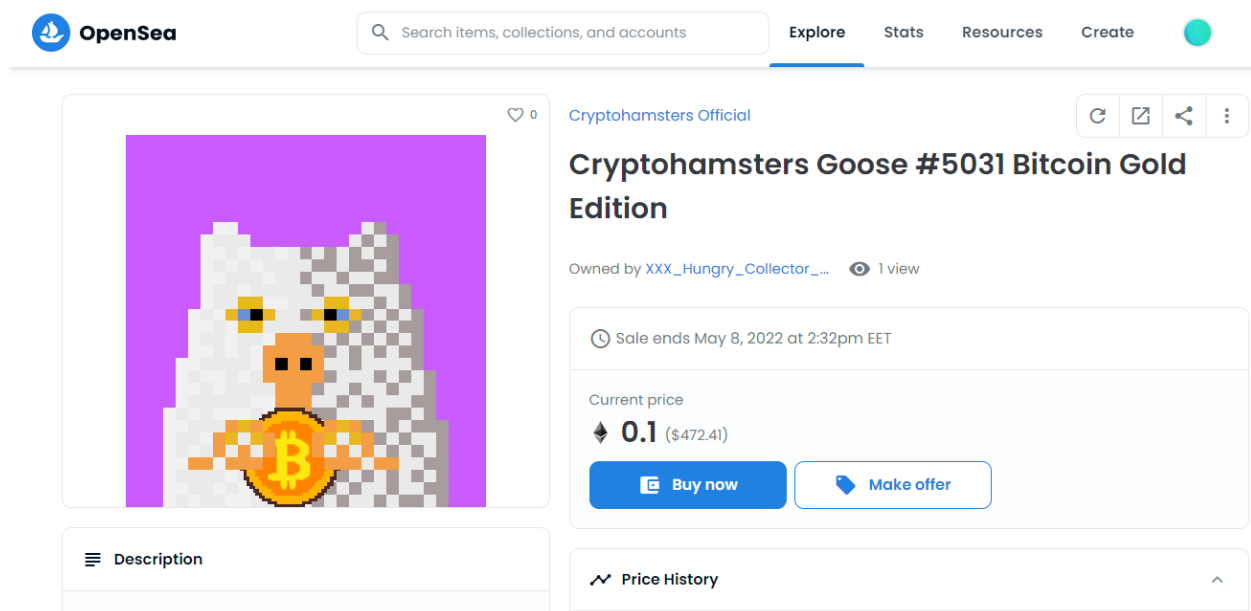

Once you've found an item that you are interested in, click on it and this will take you to its individual page.

Buying At A Fixed Price

If the NFT has a fixed price, you'll see two buttons: one for buying now, and the other is for making an offer.

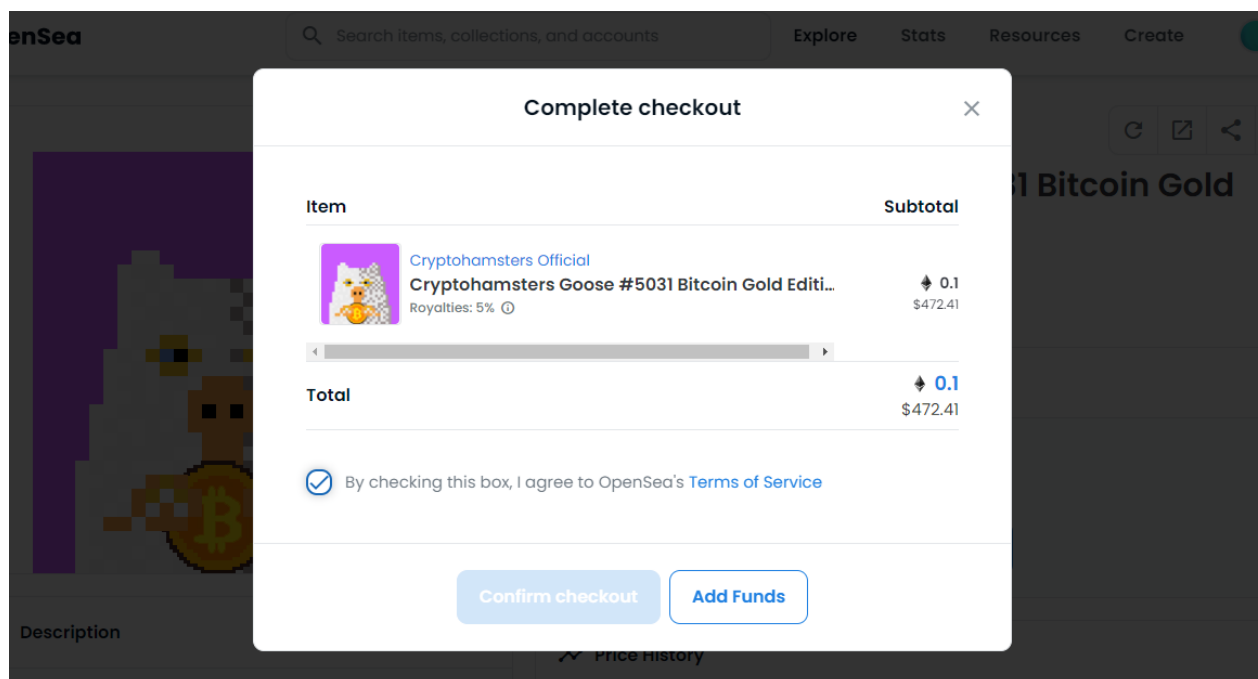

Once you've decided you want to buy it at a fixed price, click > **Buy now**.

This will give you a pop-up for completing the checkout – if you have enough funds in the wallet, check the box to agree with terms & conditions, and click > **Confirm checkout**. Otherwise, click > **Add funds** to fill up the wallet.

After confirming the checkout, the NFT should take at most a couple of minutes to appear in your wallet.

Auctions

If you have chosen an NFT that is on auction, you will only be able to make a bid. To do that, click > **Make offer**.

Description

Created by [HaruKomoda](#)

"Only the first purchaser of this work can get physical works."

Bidding for NFTs with Ethereum requires it getting converted to WETH (Wrapped Ethereum) that is used exclusively in DEXs (decentralised exchanges) and auctions for swapping tokens.

Simply set your desired price and the offer expiration date in the pop-up. Then, click > **Convert ETH** or > **Make offer**, depending on your situation.

There are also other currency options to use like USDC, MATIC, and DAI, which you can choose after clicking on the dropdown near the price field, but in this case, we will be using Ethereum.
