# DATA BENEFITS

## Effective marketing and

promotions Quality data allows for targeted marketing campaigns based on customer demographics and past behaviour. It enables personalised communication through many channels.

### Improved operational

efficiency Smoother operations by reducing errors and inconsistencies. Automation and data-driven processes help optimise staffing and other critical functions.

#### Enhanced guest experience

Personalise services based on guest preferences and history, leading to greater guest satisfaction and retention.

#### Customer relationship management

A strong database is the foundation for CRM systems, helping build long-term relationships with guests through personalised communication and loyalty programs.

#### Reduced errors and manual Work

Automated data processing reduces the risk of human errors in booking, billing, and inventory management. Minimising manual tasks, allowing staff to focus on customer services and other high-value activities.

### View data from a high 🔌

level to the lowest grain Zooming in to answer the whys and zooming out to see the impact on the business as a whole.

#### Efficient reporting and analytics Advanced reporting and analytics for business intelligence.

#### Streamlined inventory and supply chain management

Accurate databases help track inventory levels, monitor supplies, and manage procurement efficiently, reducing waste. This ensures timely restocking and minimises operational disruptions.

#### **Optimise labour**

Analyse labour forecasting ensuring optimisation, effectively setting shift patterns to utilise the workforce.

## Better collaboration and communication

A centralised database improves communication and coordination across departments and locations. trends, identifying peak seasons, and maximising revenue through effective pricing strategies.

**Revenue optimisation** 

Helps in analysing market

#### A single view of the data

Permissions and access tailored to each team member's needs so the data is relevant to their roles.

# Scalability and flexibility

Scalability as the business grows and flexibility to adapt to new technologies.

#### Informed decision-making

Data processing capabilities allow for deeper insights into customer behaviour and trends. Managers can use this information to make strategic decisions about pricing, promotions, and resource allocation.
