

# tables

## Implementing a booking system gives:

Customers certainty of booking a table

Team opportunity to prepare and manage

Management insight to make data-backed decisions

### Key Features

#### **Easy Online Reservations**

Place your booking service prominently on your website with our drop-in widget to capture maximum benefit.

#### **Real-time Availability**

Our system provides real-time updates on table availability, allowing guests to see open slots instantly.

#### Customisation and Personalisation

Collect customer preferences and special requests during booking, enabling you to be ready for them, and provide a personalised service. Whether it's a birthday celebration or a specific dietary need, you'll have all the information needed.

#### Streamlined Frontof-House Operations

Our table booking system integrates with POS systems and other restaurant management tools (ours or others). This integration allows your front-of-house team to manage tables and guests, making guest visits seamless.

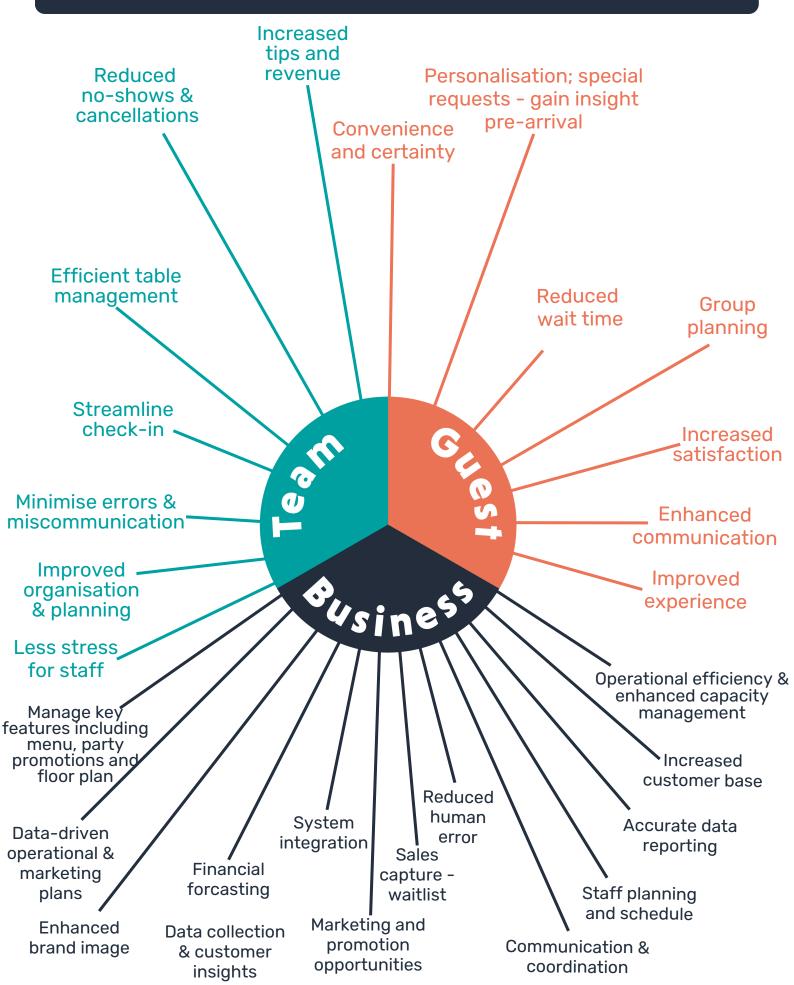

#### Data collection and Intelligence & Reporting

Gain valuable insights into your business. Our system offers intelligence and reporting tools, allowing you to track customer trends, peak times, and other essential metrics. Use this data to make informed decisions for the business.

#### **Automated Reminders**

To minimise no-shows, our system sends automated reminders via email or SMS. There is also an option to implement a deposit feature, to further reduce this.
