

Verify signer identity as part of a trusted, mobile-first signing experience

Agreements are based on intention and identity: organisations need to be able to trust that signers are who they say they are.

The standard practice of verifying a signer's identity is to send a link to the signer's email address. But agreement value, sensitivity, business risk, regional regulation, or legal requirements can drive the need for enhanced identification. The challenge is to deliver stronger verification while keeping the signing experience user-friendly.

That's where DocuSign Identify comes in. Identify provides a portfolio of enhanced signer identification and authentication capabilities built into the eSignature workflow, enabling organisations to transact a full range of agreements with increased compliance and trust. These solutions include:

- ID Verification: digital identity proofing of signers via biometric checks such as AI-enabled liveness detection, or verification of passports, driver licences, or ID cards
- Phone Authentication: multi-factor authentication via text message or phone call
- ID solutions for digital signatures: meet requirements for UK and EU electronic identification, authentication and trust services (eIDAS) compliant Advanced (AES) and Qualified (QES) Electronic Signatures
- Network of trust service solutions: Easy access to our tightly-integrated global network of trust service providers for region-specific compliance

Reduce the risk of fraud

- Require signers to clear an enhanced identification check before accessing agreements
- Verify new user identities with multiple options, such as government-issued IDs or AI-enabled biometric (liveness) detection
- Authenticate existing users with simple two-factor authentication via SMS or phone call

Streamline Compliance and audit efforts

- Support and scale compliance efforts with industry and regional standards such as Know Your Customer (KYC) and Anti-Money Laundering (AML)
- Record verification status through the eSignature Certificate of Completion (CoC) for audit purposes

Results

98%

Time saved with electronic signature and digital identification⁽¹⁾

50%

Of licence agreements now completed within 48 hours⁽²⁾

75%+

Faster processing for debit requests⁽³⁾

"Everyone knows DocuSign, [and] many people have already used it. It is very easy for our clients to verify themselves using DocuSign, the expenditure is minimal, and our experience is very positive."

About Docusign

Docusign brings agreements to life. Over 1.5 million customers and more than a billion people in over 180 countries use Docusign solutions to accelerate the process of doing business and simplify people's lives. With intelligent agreement management, Docusign unleashes business-critical data that is trapped inside of documents. Until now, these were disconnected from business systems of record, costing businesses time, money, and opportunity. Using Docusign IAM, companies can create, commit, and manage agreements with solutions created by the #1 company in e-signature and contract lifecycle management (CLM).
