MICHAEL OSMENT
Chief Technology Officer, Bedrock

Michael Osment is Bedrock's first Chief Technology Officer, where he will oversee Bedrock's Technology team across its Detroit and Cleveland portfolio, including building services, enterprise project management systems, data management and IT.

In his role, Osment will merge technology with physical buildings to create new environments that deliver better services, reduce energy usage and enhance digital infrastructure.

Osment has spent more than 20 years as an information and technology executive and helped to pioneer "Smart Building" infrastructure – which emphasizes cutting edge wireless technology and the use of data and analytics to optimize building services, enhance sustainability, reduce operating costs and create new streams of revenue.

Most recently, Osment served as the interim Chief Information Officer at Fortium Partners. In this role, he led the turnaround of a rapidly growing manufacturing company after a failed enterprise resource planning implementation.

He has also held the role of Chief Information and Technology Officer at AlixPartners, Taubman, and with the Enterprise Activities Group at General Motors. Osment helped to define "Smart Malls" and has led the way in developing fiber optic infrastructure to deliver new services and cut energy usage two-fold.
