

Quickly deliver key features that let you monitor and control IoT devices in real time

BENEFITS

PubNub enables you to quickly integrate real-time connectivity into your backend, mobile apps, and IoT devices that is fast, secure, and reliable. From smart home to consumer electronics, IT & telecom, agriculture, manufacturing, security systems, smart city, and more, PubNub will save development time and accelerate your time to market.

Receive real-time data from smart sensors and monitor the status of devices

Control home equipment and other connected devices from anywhere

Trigger in-app alerts and push notifications in response to certain sensor readings

WHY PUBNUB?

Our robust APIs allow you to implement real-time functionality fast.

- 50+ SDKs
- <100ms latency
- 99.999% uptime SLA
- 65+ pre-built integrations
- ISO 27001, SOC 2 Type II, GDPR, and HIPAA compliant
- 24x7 technical support
- Free for POC development
- Global replicated PoPs
- Architecture reviews
- Supports millions of concurrent users

FEATURES

- Device provisioning
- Streaming of smart sensor data
- Control commands
- Presence & state detection
- Real-time logs
- Live stats & dashboards
- Data-triggered alerts
- Mobile push notifications

The actual implementation of PubNub's network was incredibly easy. It was up and working the first day. I would have had to hire several more developers and spend weeks or months to get the functionality, scalability, and security we have with PubNub.

Isaac Martin
CTO at Dwelo

TRUSTED BY LEADING IOT BRANDS ACROSS THE GLOBE

Over 2000 companies worldwide choose PubNub because we provide a comprehensive set of core building blocks to easily create interactive and connected experiences that are secure, scalable, and reliable. Looking to learn more about building with PubNub? [Get in touch with our team.](#)
