1. These figures reflect the renewables that we have contracted to provide. New renewables come from generation facilities that first began commercial operation within the past 15 years.
2. In the case that there is a shortfall in electricity generation from program facilities, PGE may provide customers with unbundled renewable energy certificates "(Replacement RECs)".
3. We will annually report to you before August 1 of next year in the form of a Historical Product Content Label the actual resource mix of the electricity you purchased.
4. These figures are based on generated and purchased energy associated with serving retail customers within the state of Oregon, as required by the Oregon Department of Environmental Quality (ODEQ). Some or all of the renewable energy attributes associated with PGE's Basic Service Mix may be sold, claimed, or not acquired.
5. Hydro includes power purchased from Bonneville Power Administration (BPA).
6. Per ODEQ rules, unspecified purchases represent purchased power for which a specific generating resource is not known and could be any of the generation types (e.g. wind, hydro, gas). Other purchases may include biomass, biomass gases, landfill gas or other fuel types.
