

# Selective Water Withdrawal Tower

## The Selective Water Withdrawal...

	Before Dam (pre-1960s)	Before SWW (1964-2010)	Current Operations (2010-Today)
Fish Passage			
<p>...creates reservoir currents that guide juvenile salmon and steelhead into collection facilities so they can be transported downstream around the dams.</p>			

Temperature			
<p>...pulls water from the surface and bottom of Lake Billy Chinook so water released below the dams more closely matches conditions expected if the dams weren't there.</p>			

Power Generation			
<p>...has no effect on the amount of electricity produced by the Pelton Round Butte Hydroelectric Project.</p>
