

Energy Partner Resiliency

Energy options to help your business maintain reliability

Always on and earning

We know having access to clean, reliable power at all times is crucial to your operations. With Energy PartnerSM Resiliency, we work with businesses like yours to provide backup options through batteries and on-site generation — allowing you to contribute to a clean energy future, prepare for emergency situations and reduce operating costs. In exchange, when your site is not using your backup resource, we may tap into it to allow for flexible grid operations.

Leave the logistics to us

PGE will provide support and funding for your generator or energy storage solution, perform routine and preventative maintenance, monitor health and performance, and keep your generator fueled, even during an outage.

Get financial help with upfront costs and reduce ongoing O&M for your power backup.

Prepare for the unpredictable with onsite power backup.

Make strides toward reaching your business' sustainability goals.

Get started

Ready to explore resiliency options for your business? Get in touch with your PGE representative or email dsg@pgn.com.

With a number of energy management options, we have solutions to help your business operate more efficiently and save you money. Learn more at portlandgeneral.com/energypartner.
