# ShineForth Case Study

HerdDogg.com a rapidly growing livestock management company, faced the challenge of scaling its operations to accommodate the increasing demand for its services. With a diverse tech stack including Ruby on Rails, Node.js, and React Native, HerdDogg aimed to enhance its herd management tools, mobile, and web app software while incorporating Near Field Communication

(NFC) and Bluetooth hardware for livestock biometric monitoring.

HerdDogg's expansion brought forth the task of managing a spectrum of technologies, encompassing a widelyutilized framework for web applications, a server-side runtime environment for backend services, and a cross-platform framework for mobile app development. This challenge involved the seamless integration of these technologies to support thousands of herd animals, with the aim of achieving efficient herd management, mobile accessibility, and dependable biometric monitoring.

## - CHALLENGES

#### **Cross-Platform Compatibility**

With the use of React Native for mobile app development, HerdDogg faced the challenge of ensuring seamless crossplatform compatibility. As well as ensuring seamless communication and data flow between diverse technologies.

#### **Scalability Amidst Growing Operations**

The implementation of scalable architecture to accommodate the increasing number of herd animals brings forth scalability challenges. Managing and optimizing performance as operations grow, without compromising efficiency, is a complex challenge to address.

aine For

#### **User-Centric Feature Implementation**

While upgrading mobile and web app interfaces, incorporating features based on user insights introduces challenges related to user-centric design. Balancing user preferences, needs, and technical feasibility adds complexity to the enhancement of user experiences.

# RESULTS

### SEAMLESS INTEGRATION

The integration of Ruby on Rails, Node.js, and React Native proved highly successful for HerdDogg, resulting in a cohesive and efficient technology stack. This achievement ensured a seamless data flow and communication between the web and mobile applications, enhancing overall user experience.

# SCALABILITY AND PERFORMANCE

HerdDogg's focus on scalability and performance optimization resulted in the implementation of a scalable architecture capable of monitoring thousands of herd animals. This scalability was achieved without compromising real-time monitoring and data processing efficiency, positioning the company for sustained growth.

### HARDWARE EXPANSION

The expansion of NFC and Bluetooth hardware marked a significant advancement for HerdDogg, enabling reliable biometric monitoring of thousands of herd animals. This successful hardware expansion also addressed challenges posed by diverse environmental conditions, ensuring enhanced hardware compatibility.

#### USER EXPERIENCE IMPROVEMENTS

User experience improvements were realized through the upgrade of mobile and web app interfaces, informed by valuable user insights. These enhancements led to an overall improved user experience, with additional features that enhanced usability and convenience for ranchers.

# Here is the reason why WHY CHOOSE US

"ShineForth has been supporting us in software product development since before our commercial launch, through the launch, and now post-launch. They have been instrumental in our successful go-to-market plan and deployment. Their developers are talented, thoughtful, thorough, and timely. I've been very impressed with the not just work products delivered but the people that deliver them. Some of our biggest needs when we engaged ShineForth were on our mobile app. These included some IoT device interactions that can sometimes be tough to work on, but ShineForth had the right people to get in there and contribute right away and immediately add value to our apps. It's a good feeling to look at your roadmap and know you have the right people to address all the elements of your product and business efforts on the journey ahead."

Jeff Mitchell | Chief Technology Officer
