TELEPASS IS THE FIRST ACCREDITED OPERATOR IN POLAND IN THE EETS SYSTEM

The SAT electronic toll service for trucks is available in 14 European countries

Milan, 10 October 2022 — Telepass announces that it has been certified in Poland to enter the EETS - European Electronic Tolling Service system. The Telepass SAT interoperable device (which works via satellite) is the first one certified in this country for the EETS system and thus becomes available in a total of 14 European countries.

The obtained certification enables the full EETS service to be offered in Poland as well, starting October 17, as in the thirteen European countries already covered by the interoperable electronic toll service dedicated to heavy vehicles (over 3.5 tonnes) - Italy, France, Belgium, Spain, Portugal, Austria, Germany, Denmark, Sweden, Norway, Hungary, Switzerland, Bulgaria - and Telepass Sales Partners can already sell the device.

"We are the first accredited operator in Poland in the EETS system, just as we were the first in Germany in 2019. This demonstrates Telepass' ability to offer an innovative, integrated and high-quality service as well as the recognition of strong reliability and trust from European countries". - said Francesco Maria Cenci, Head of Toll Unit at Telepass. He adds: "Poland is a key market for the world of road transport because it is a strategic area for European transport flows between East and West. We are providing a solution to road hauliers not only in Poland, but throughout Europe, with a single interoperable device capable of facilitating transits between several countries".

By offering a single payment device in 14 countries, Telepass confirms its position as the European market leader in the electronic toll services, with a 30% market share and more than 10 million devices distributed, covering over 171,000 km and contributing to the simplification of the movement of goods and people within the European road network.

Telepass

The Telepass Group was founded in 2017 with the aim of creating an integrated system of services for urban and extra-urban mobility. Today Telepass is an ecosystem that offers individuals and companies an increasing number of options, also usable in digital mode, for flexible, safe and sustainable mobility. A mobility pioneer committed to facilitating the freedom of movement of people, expanding its offer, investing in cutting-edge startups and ensuring access to its services in Europe, so that every movement is truly a borderless experience.
