

ONEOCEAN SHIP MANAGEMENT

Stay informed. Stay connected.

One solution to manage operations and processes across maintenance, safety management and certification via a single platform.

Simpler access to the right information

Effective maritime management is key for safe, clean, efficient and profitable voyages. Different roles need different information to perform their jobs. Often this leads to the use of multiple systems and tools which can add complexity, cost, and slow you down.

OneOcean Ship Management, a solution within OneOcean Manage, provides real-time information and instructions to the right people, at the right time via one platform.

A modular approach

Plug-and-play modules allow you to tailor OneOcean Ship Management to meet the operational and compliance needs of your business. These modules support technical management, operations, and include a widely trusted and automatically-updated Safety Management System (SMS).

Functionality extends to maintenance, purchasing, scheduling, charter management, and the integration of external stakeholders. And the Platform's intuitive interface improves clarity and control. In an emergency, it provides detailed instructions, so a ship's crew is immediately aware of what to do. Digitised internal inspections allow for fast, root-cause analysis and an up-to-date audit trail.

Flexible, always-on technology

OneOcean Ship Management is available off-the-shelf and ready to go or it can be highly customised according to your specific requirements. And because the technology is cloud native, OneOcean Ship Management is accessible anywhere, on any device via mobile app.

In this guide, we'll explore the modules of OneOcean Ship Management and the efficiencies they bring to maritime management.

Safety Management System (SMS)

SMS includes:

Document Management

QHSE

Certificate Management

Technical Management

Operations

SMS

Building a sound framework for compliance

Having an efficient Safety Management System (SMS) in place provides a solid foundation to deliver operational efficiencies across the business and creates a work culture where crew feel safe and external shareholders reassured.

OneOcean Ship Management's **SMS** helps you methodically manage health and safety through shared access to data, effective communications, efficient document management and systematic oversight. One or a combination of tailored modules can be integrated to simplify your compliance challenges and free resource to focus on higher priority tasks.

These modules include **Document Management**, **QHSE** and **Certificate Management**.

Document Management

Transforming your operational processes

The Document Management module removes the need for complex paper trails, replacing inefficient and decentralised methods of document exchange and maintenance with one streamlined workflow.

Documents are digitally kept up to date and synchronised in real time, so teams can work smarter. The solution supports the creation of everything from certificate management and forms to checklists and risk assessments. These can then be made open to all or selectively accessible to control the flow of information.

Highlights

Simplifies document verification and approvals by all relevant team members

Equips vessels with the digital documents required for an entire journey

Supports KPI evaluation and calculation for better decision-making

Removes disparate data systems and manual tracking to save costs

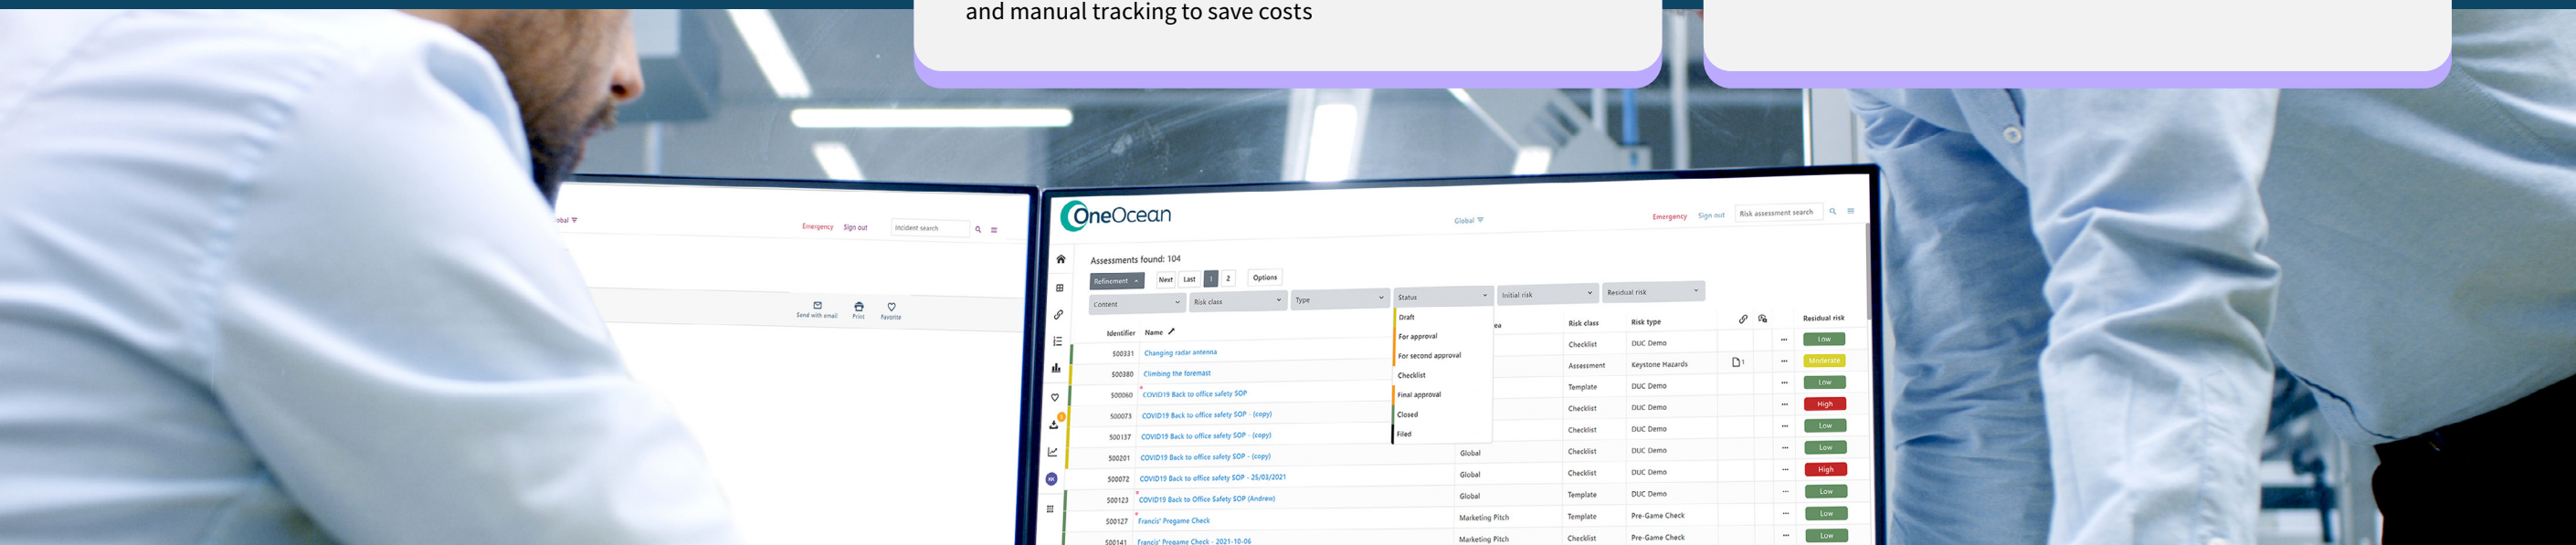

Benefits

Mitigates risk through up-to-date documentation

Improves time efficiencies through easily accessible data

Accurate and accessible paper-free audit trail

Accessible on mobile devices

QHSE

A consolidated approach to risk mitigation

The QHSE module provides an intelligent digital framework for managing and exchanging documents – such as Inventory of Hazardous Materials certification for arrival at port. This gives shoreside teams the oversight needed to promote a culture of safety and compliance.

Protocols for emergency situations and deployment to onboard crew can be easily managed from ashore. It also includes undertaking risk assessment, incident management, and the execution and management of inspections.

Available as either a ready-to-go solution that provides built-in workflows for a standardised approach or tailored to fit with your existing workflows, **QHSE** operationalises safety procedures and transforms processes.

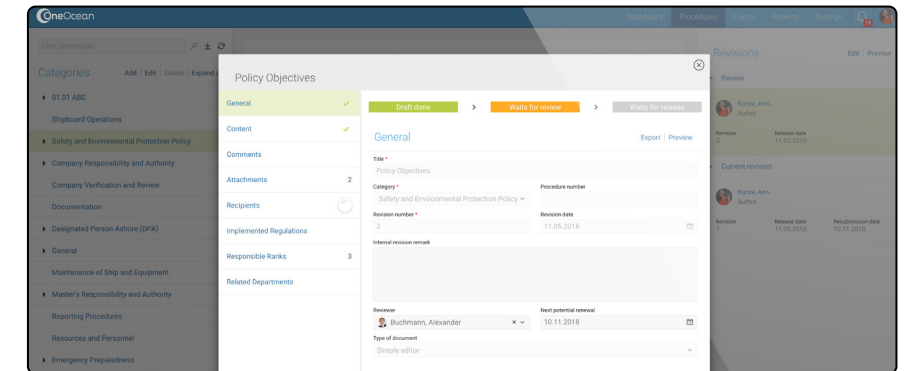

Highlights

Centralised, consolidated platform for safety management

Tailored or standardised approach to meet the needs of your fleet

Intelligent digital framework ensures compliance and improves operations

Clear, visual interface for ease of use

Benefits

Simple and intuitive support for QHSE activities

Complete documentation all in one place

Mitigates risk through up-to-date documentation

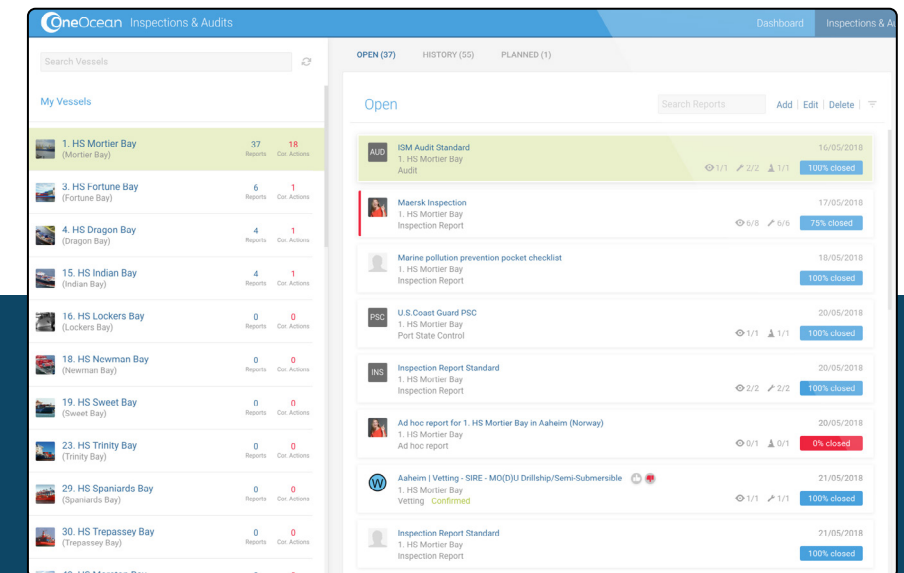

Improves time efficiencies with easily accessible data

Accurate and accessible paper-free audit trail

Accessible on mobile devices

Easier to evaluate information, supporting better decision-making

Customisable to your bespoke fleet requirements

Certificate Management

A digital approach to ensuring fleet compliance

Having up-to-date certificates for every route, crew, cargo and vessel is essential for smooth and secure maritime operations. But with multiple vessels to manage and regulations constantly changing, ensuring crew and equipment have the right certification for passage is a time-consuming task.

The Certificate Management module of OneOcean Ship Management simplifies this process by collating digital versions of all vessel and crew certifications. It stores them in a single centralised location that crew and shore-based teams can access 24/7 via the OneOcean^{LR} Platform.

Highlights

24/7 access to a digital library of all fleet certification

Accessibility for teams and departments on shore and ship

Crew-led revalidation of certificates to support certificate management

A complete view of fleet certificate status in a quick-to-interpret colour-coded display

Benefits

One location for certificate administration

Intelligent reminders for expiry dates

Option to filter by vessel

Adding of remarks or attachments to certificates

Assign certificate responsibilities to employees or departments

Technical Management

A connected approach to fleet operations

Maintaining vessels, so they run safely and efficiently while complying with evolving regulations, is a complex task. One that relies on effective collaboration across stakeholders and coordinating various activities to keep the fleet in optimum condition and ensure safe working conditions for crew.

The Technical Management module, within **Cloud Fleet Manager**, draws together the information and processes needed to simplify technical management for your fleet and ensure compliance. It enables seamless information sharing to optimise operations, address technical challenges and implement best practice.

Highlights

Clear dashboard overview of all vital maintenance information and insights

Ease of communication and collaboration between internal and external stakeholders

Manage supplies and all associated costs

Central resource for all compliance related information

Streamlines processes and reduces manual effort

Benefits

Consistent implementation and enforcement of safety protocols

Ensures compliance with industry standards and regulations through knowledge sharing

Centralises all MARPOL Electronic Record Books and fleet certificates

Encourages and enables communication between vessels

Supports tracking and management of fleet bunkers

Simplifies the planning and management of maintenance work

The complete purchasing process delivered through one platform

Streamlines service request management

Enables compliance while reducing manual effort

Operations

Giving you a complete view of your fleet

Successful fleet management means having a clear view of your entire fleet's activity at any given time. But with multiple vessels in different locations and several agents to manage, simultaneously keeping tabs on your fleet and your finances is difficult.

The Operations module of OneOcean Ship Management, within **Cloud Fleet Manager**, is a complete approach to running your fleet and its charters. It consolidates the necessary administration and operations needed to successfully charter vessels and keep them secure. This includes contract data and the administration of schedules, and visualisation of fleet movements, inspections and ports on voyage.

Highlights

Consolidates all charter related information – past and present – for ease of operations and better decision-making

Single platform for central management and insights into all claims

Supports schedule management, with all information held in one place

One view of all critical information, including vessel location, travelling inspectors and risk areas

Benefits

Forecast cashflow and create invoices

Maintain charter, broker and agent information in a central place

Total cost of hire periods highlighted for each vessel

Detailed off-hire periods, causes and costs, plus data on past and pending off-hire periods and claim types

Direct integration with crew allows them to support schedule management

Easy-to-use visual interface that highlights key information

Enable effective maritime management
