

## Infusaport Removal - Interventional Radiology (IR)

You have been scheduled to have your port removed in the Interventional Radiology (IR) Department at UW Hospital and Clinics. This office is located at 600 Highland Ave., Madison WI. This handout explains some common questions patients have about the procedure.

Please follow all instructions to avoid having your procedure postponed.

### Getting Ready

- A Nurse from the Interventional Radiology Department will call you to review this information with you. Please tell the nurse if you take blood thinners, are allergic to anything, or are pregnant.
- Do not eat anything for 6 hours before the procedure. You may have clear liquids such as clear juices or black coffee up until 4 hours before.
- You may take your normal morning medicines with a sip of water.
- You will only need to take off your clothes from the waist up. Wear comfortable clothing and a top that is easy to take off.
- Due to sedation, you **must** have someone drive you home after the procedure. You should not drive or make important personal or business decisions until the next day.

Once you have checked into the G3/3 waiting area a nurse will walk you back to the radiology prep area for a brief workup.

### The Work-Up:

- Questions will be asked about your health history.
- Getting baseline vital signs (blood pressure, pulse, etc.).

- Placement of an IV. This will be used for blood draws, fluids, pain medicine, or sedation as needed.
- The doctor will discuss the procedure with you. You will receive a consent form to sign if you agree.

### Procedure

Once in the IR procedure room:

- A nurse will check your vital signs. You will be given medicines to help you relax and help with any pain.
- Your skin will be washed with sterile soap. A sterile drape will be placed over your body. The drape is made into a tent so that it does not lie on your face. Cool air will flow under the drape through a piece of tubing. There is a clear plastic portion of the drape. It allows you to talk with the nurse in the room.
- The doctor will numb the site with and make a small incision near the port. Then the port and tubing will be removed. All of this is done under the guidance of fluoroscopy (real time x-ray seen on a TV screen). Once the port has been removed the port pocket will be closed with sutures and sterile surgical glue. Steri-Strips may also be used.
- Before you leave the room, the nurse will place a dressing on the site.

### After the Procedure

- You will be taken back to the prep and recovery room. The nurse will check your port site and vital signs.
- You will recover for about 2 hours.
- Plan to stay for at least 4-6 hours.
- You will be discharged when it is safe for you to leave. Your discharge

instructions will be reviewed with you.

- You may need to return to the clinic in 7-10 days to have your site checked.

### Site Care at Home

- You may shower with the site covered. Avoid soaking the incision in water (no tub baths or swimming until healed).
- **No** activities that pull on the incision. You will most likely have dissolvable sutures and surgical glue. You may have a few Steri-Strips. **Do not** pull the Steri-Strips off. They will fall off by themselves. **Do not** pull glue off if it becomes loose. Clip the loose glue with scissors.
- Wear loose fitting clothing for a few days.
- Plan for rest, but also move around the house as much as you can. You can resume your normal routine when you feel ready.
- **Do not** drive while you are taking narcotic pain pills.
- **No** heavy lifting or strenuous upper body movement for 1 week.
- It is normal to have small areas of bruising.

- Check your incision daily for signs of infection.
  - Increased redness
  - Swelling
  - Red or hot incision
  - Foul smelling drainage
  - Fever over 100° F.

### When to Call

- Fever over 100° F for 2 readings taken 4 hours apart
- Excess swelling
- More redness at incision site
- Bleeding or pus from incision
- Increase in pain

### Who to Call

#### Radiology Department

Monday -Friday, 8:00 am to 4:30 pm.  
**(608) 263-9729 Option 3**

**After hours, weekends, and holidays**, call **(608) 262-2122** this number will be answered by the paging operator. Ask for the Interventional Radiologist on call. Leave your name and phone number with the area code. The doctor will call you back.

If you live out of the area, call:  
**1-800-323-8942.**

If you are a patient receiving care at UnityPoint – Meriter, Swedish American or a health system outside of UW Health, please use the phone numbers provided in your discharge instructions for any questions or concerns

Your health care team may have given you this information as part of your care. If so, please use it and call if you have any questions. If this information was not given to you as part of your care, please check with your doctor. This is not medical advice. This is not to be used for diagnosis or treatment of any medical condition.
