

Semen Sample Collection After Vasectomy

After your vasectomy, you will need to have a semen sample checked at least once or twice. The first sample should be brought in 2-3 months after your vasectomy.

Read this handout for collection and transport instructions, as well as a listing of drop-off locations.

You must drop off samples **8-12 weeks after your vasectomy**. You must collect the sample at home.

1. Either pick up a **sterile** container from a lab listed on the next page or use the one that was given to you after your procedure.
2. **Do not ejaculate for three days** before you collect your sample.
3. Masturbate to collect your sample into the sterile container. **Do not use a condom or spermicide.**
4. After you collect the sample, you **must keep the sample warm** (body temperature) until you drop it off at the lab. You can do this by carrying the sample in hand or against the body.

5. **Hand-write** this information (Sharpie works best):

- a. Full Name
- b. Date of Birth (D.O.B)
- c. Date of Collection
- d. Time of Collection

If any of this information is missing, it may result in testing **delay** and/or **rejection** of sample.

6. You **must** drop off your sample within **two hours** of collection at any UW Health lab listed on the next page **between 8:00 am. and 2:00 pm. Monday through Friday only.**

Your health care team may have given you this information as part of your care. If so, please use it and call if you have any questions. If this information was not given to you as part of your care, please check with your doctor. This is not medical advice. This is not to be used for diagnosis or treatment of any medical condition. Because each person's health needs are different, you should talk with your doctor or others on your health care team when using this information. If you have an emergency, please call 911.
