

Health Facts for you

Urethroplasty

Urethroplasty is the surgical repair of the urethra. You may need this surgery to repair strictures or if there is trauma to the urethra such as a pelvic fracture.

After Surgery

You will have swelling, bruising, and spotty bleeding from the penis. The stitches will dissolve in about two weeks. You will likely go home with a catheter in your bladder.

Activity

- Keep your wound clean and dry.
- You may shower 2 days after surgery. Shower with your back to water as much you can.
- Do not soak in a bathtub, hot tub, or swimming pool for 2 weeks.
- After the catheter is removed, wait 2 weeks before having sex.
- Nothing strenuous for 2 weeks after the catheter is removed or until okayed by your doctor.

When to Call

- Increased redness or tenderness after the first 24 hours.
- Pus or blood from the wound. It is normal to have some bloody drainage and/or mucus from around the catheter.
- Pain not controlled by pain pills.
- Fever over 100.5°F, taken by mouth for 2 readings, taken 4 hours apart.

- Problems with the catheter.
- Trouble passing urine.

Who to Call UW Health Urology 608-263-4757

UW Health at The American Center Urology **608-440-6464**

UW Health One South Park Urology **608-287-2900**
