* Link to the software download is <https://my.genelec.com/>

Internet Connection	An internet connection is required • Register / Login to My Genelec account • during downloading Aural ID 2.0 installation package* • occasionally to update your license to use Aural ID 2.0 • occasionally to download your personal Aural ID HRTF data complementary head-and-torso simulator HRTF data The Genelec Aural ID Creator Mobile App is required • to open your personal My Genelec account • to place an order for your personal Aural ID profile (HRTF) Personal Aural ID profile file contains your personal HRTF and is needed for the most accurate rendering of the virtual loudspeakers in the Aural ID application. The Aural ID Creator App is available in the app stores for Android and iPhone.
---------------------	---

Fixes in Aural ID 2.0.1 application

- Fixed issue to configure Aural ID bridge input.

Improvements and Extension in Aural ID 2.0 application

The feature set of the Aural ID 2.0 application includes all the features in original Aural ID plugin and introduces several improvements and additions

- Stand-alone virtual audio interface format on Mac computers, to cover all usage scenarios and to enable support for all audio workstations and rendering engines, making Aural ID 2.0 a true alternative in all monitoring situations,
- Three HRTF use scenarios (Neutral, Immersive and Raw HRTF) for very natural listening experience, compatible with all professional headphones,
- Support for increased channel count, supporting up to 9.1.6 virtual monitoring layouts, extending monitoring system coverage to all situations from mono and stereo to modern multi-layer immersive layouts,
- Integrated head tracking with computer webcams, for the immediate access to natural listening experience, resembling closely loudspeaker-based monitoring,
- Head tracking data also accepted via the Open Sound Control (OSC) standard interface messages, for maximum head tracking system compatibility,
- Improved compatibility with all professional headphones,
- Access to the complete raw personal HRTF for the highest accuracy in the cases where the headphone has been externally equalized,
- Personal equalizer supports neutral monitoring experience over headphones and allows sound character matching with reference loudspeaker monitoring system,
- Personal equalizer export and import,
- Enhanced calibration of bass reproduction when the bass contains directional information,
- Level meter display for inputs and outputs makes optimization and channel alignment checking easy and intuitive.

Fixes in Aural ID 2.0 application

- Plug-In format is no longer supported. The virtual soundcard format makes the Aural ID App more compatible with all sound sources (DAW or streaming software).
- Improved memory management for the last working situation, enabling smooth re-start of work.
- Stream-lined gain structure, enabling accurate loudness alignment when bypassing the HRTF processing.

More information

To download Aural ID 2.0 application install package visit your MyGenelec account. Aural ID 2.0 Operating Manual gives full coverage of all details.
