

Software Release Note

Smart IP Manager

Version: 1.0.27

Date: 2022-01-17

Fix a problem related to ISS (Intelligent Signal Sensing) Sleep state

Smart IP devices can go to sleep state if there is no signal present. Devices in sleep state could not be controlled correctly, but this is now fixed.

Finding device zone on earlier scan phase

Previously devices were shown initially in unknown zone. Now the device zone is resolved in earlier phase and devices are placed on correct zone right from the start.

Removed dependency to Dante api

Dante API is not used in this product anymore
