

Geoff Wells, Herne Hill Farm manager, has a full complement of energy saving options at his command, solar panels, wind turbines, ground source heating and now Voltage optimisation, making his farm one of the most energy efficient in the country. Voltage consistency, saves money and protects equipment, is easy to install and fits comfortably within energy saving systems installations, (see below). A standby

generator is also used by the farm, as the livestock and farm needs electricity 24 hours a day, 7 days a week all year round. The optimiser was presented to the customer via a CEF contractor enquiry and was purchased from CEF due to the back-up, support and customer experience provided. The contractor also found the installation procedure very easy and simple to follow.

ENERGY SAVING COMMERCIAL VOLTAGE OPTIMISATION FROM MCG INDUSTRIAL!
