

Evolve your processes, discover better outcomes.

Use enterprise system data to visualize, analyze, and optimize end-to-end processes, revealing opportunities to enhance automation and orchestration.

Why your processes are inefficient

Limited visibility

Most organizations don't have comprehensive visibility into how work actually happens across systems, AI agents, robots, and people.

Missed optimization opportunities

Hidden bottlenecks, rework, and inefficiencies remain undiscovered without data-driven visualization and analysis.

Inefficient resource allocation

Without process-level insights, organizations can't prioritize automation and improvement initiatives effectively.

Manual monitoring

Manual process tracking requires ongoing human intervention and can't scale without intelligent monitoring.

UiPath Process Mining

Leverage event log data from your enterprise systems to gain comprehensive visibility into how work truly happens. Understand real process flows, uncover bottlenecks, and turn insights into action by informing automation and orchestration efforts.

Deep process insights

Extract actionable insights from enterprise systems using native connectors for SAP, Oracle, and Salesforce to visualize real process execution across operations.

Process transformation

Use simulation capabilities and KPI dashboards to model process changes, forecast impact, and drive efficiency across teams.

Cohesive automation

Optimize enterprise operations by connecting insights from Process Mining to agentic orchestration (UiPath Maestro), ensuring AI agents, robots, and people work in sync.

Maximize automation success

Identify the best automation candidates and ROI opportunities by targeting high-impact, repetitive process patterns.

Key benefits

Process excellence

Enable continuous optimization through data-driven process insights.

Customer experience

Enhance customer journeys by identifying friction points and optimizing process flow.

Workforce efficiency

Reduce manual effort by automating repetitive process steps uncovered through mining insights.

Capacity creation

Inform automation and optimization efforts to free up employee capacity for higher-value work.

Revenue optimization

Detect revenue leakage by identifying slow approval paths, rework, and inefficiencies.

Cost savings

Prevent costly errors by exposing deviations and compliance gaps early.

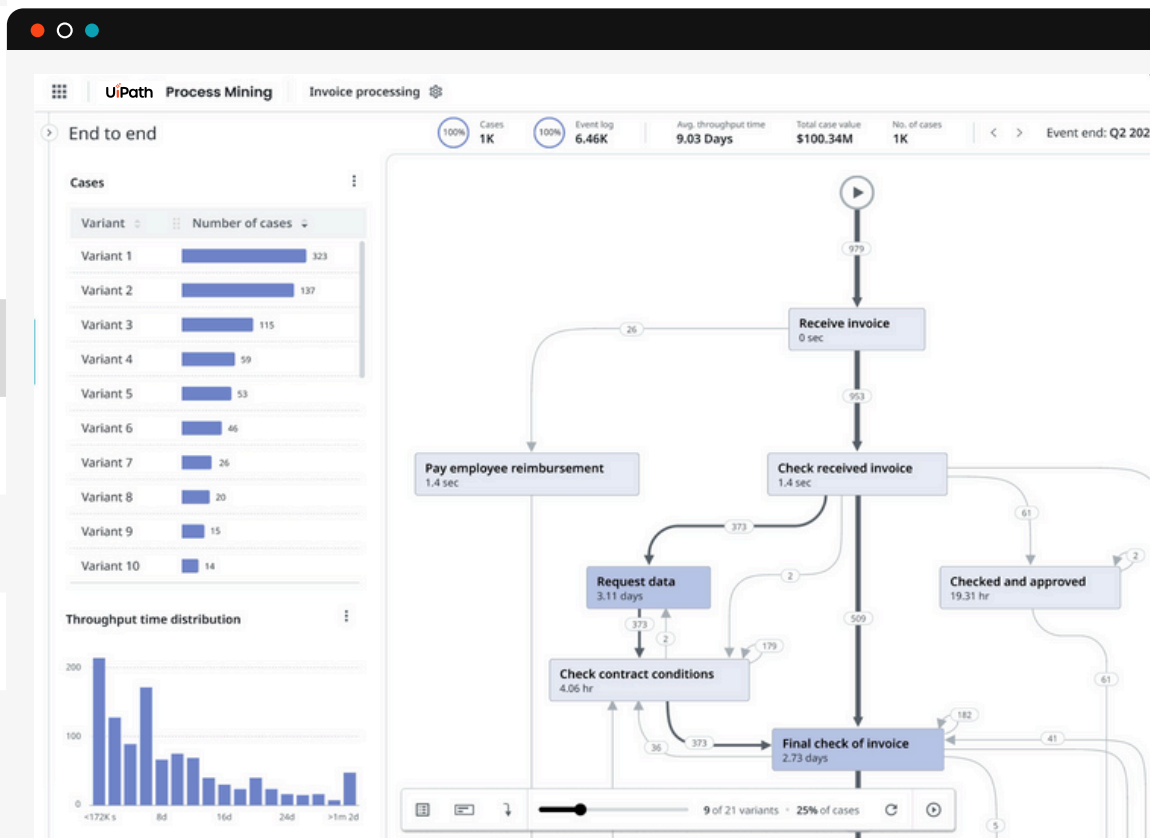

Time savings

Accelerate business cycles by removing redundant process steps.

Risk management

Identify compliance risks and deviations through KPI tracking and conformance checking.

How does it work?

UiPath Process Mining doesn't just show you how processes run, it provides the **insights** that inform **agentic orchestration**, enabling **continuous refinement** and **scalable improvement** across the enterprise.

DISCOVER BUSINESS PROCESSES ACROSS SYSTEMS

Process Mining extracts and analyzes data from enterprise systems like SAP, Oracle, and Salesforce to provide comprehensive visibility into your business processes. By leveraging event logs, you can discover how processes actually flow across your organization, revealing inefficiencies and automation opportunities.

UNDERSTAND PROCESSES AND IDENTIFY OPTIMIZATION OPPORTUNITIES

Analyze bottlenecks, rework, and variations to understand where to streamline and automate. Visualize the true flow of work to see where improvement will deliver the highest impact.

TURN INSIGHTS INTO ACTION

Use insights from Process Mining to identify and prioritize automation and optimization opportunities. Through alignment with UiPath Maestro, these insights inform intelligent orchestration across AI agents, robots, and people.

CONTINUOUSLY MONITOR PROCESSES AND PROACTIVELY KEEP THEM ON TRACK

Track key KPIs to confirm that automation and process improvements deliver expected results. With continuous monitoring, recommendations, and insights, employees can make informed decisions and sustain process excellence.
