Ui Path Reboot

Connector Builder for UiPath Integration Service

Quickly build new API connectors to the systems you need

Add custom connectors to your next automated workflow

With **Connector Builder for UiPath Integration Service,** you can build your own custom connectors to unlock the value of third-party APIs.

Your custom connector appears automatically in the Integration Service Connector Catalog.

Share new connectors to help eliminate integration bottlenecks

Connector Builder offers a simpler way of adding and deploying native API integrations to meet integration requirements. With Connector Builder, you can:

- Create new automation connectors using any RESTful API.
- Publish and share new connectors directly to the Integration Service Connector Catalog.
- Contribute new customized
 connectors to the UiPath community
 via **UiPath Marketplace**.

When you publish a new connector, users can immediately deploy that integration for any automation use case, including those across UiPath products where Integration Service is available.

Who needs Connector Builder?

Technology/business partners

Deliver ready-made custom integrations to your clients—or provide connectivity to your own software applications.

UiPath customers

Empowers business users with baisc API skills to build custom connectors within your ecosystem and expand your range of automation use cases.

Community developers

Share your application expertise by contributing connectors and solutions to UiPath Marketplace.

Configure, execute, and debug your API resources.

Start quickly, modify as needed

- Remove automation bottlenecks by creating API-based connectivity to any business system in your organization.
- Quickly fill integration gaps by adding custom connectors to enrich and expand the Integration Service Connector Catalog.
- Deploy ready-to-use connectors that work seamlessly across UiPath products including Studio, Orchestrator, Apps, and robots.

A better configuration experience for RPA developers

- Configure and test RESTful APIs and publish them as a fully supported catalog connector.
- Import common API formats, including Swagger, YAML, and Postman collections.
- Reuse the Integration Service authentication layer that works across the product suite.
- Tap into support from multiple authentication protocols, including OAuth 2.0 Authorization Code, Client Credentials, Basic, PAT, and API-Key.
- Expose CRUD API resources, or customize resources for ease of use within automations.
- Provides seamless integration with data models, activities and events.

UiPath Integration Service

UiPath Integration Service seamlessly combines user interface (UI) and API automation, providing developers access to both capabilities within the same design environment—even within the same automation workflow.

Integration Service comes with a large and rapidly growing catalog of popular, pre-built connectors, curated activities, and event triggers. API connectors dramatically simplify integration and authentication for any automation or workflow process.

For a broader look at the role APIs play in modern business automation platforms, we invite you to read our white paper.

How API Integration Supports Process Automation
