

UiPath® Test Suite™

Deliver enduring quality with AI-powered continuous testing

Supercharge automated testing for your applications with UiPath Test Suite: the resilient, AI-infused testing solution powered by the UiPath Business Automation Platform.

Unlock enterprise-wide, production-grade, and AI-powered test automation capabilities to deliver automations and applications quickly and continuously at scale.

Benefits

Effortlessly automate, execute, and manage tests across virtually any technology without worrying about maintenance

Unlock the power of Generative AI for **more efficient testing** to drive faster time-to-market

Automate more and faster with low-code and coded authoring for testing virtually any technology

Boost quality through **greater test coverage** combined with faster and more reliable execution

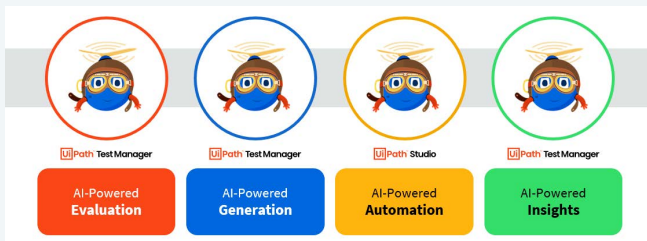

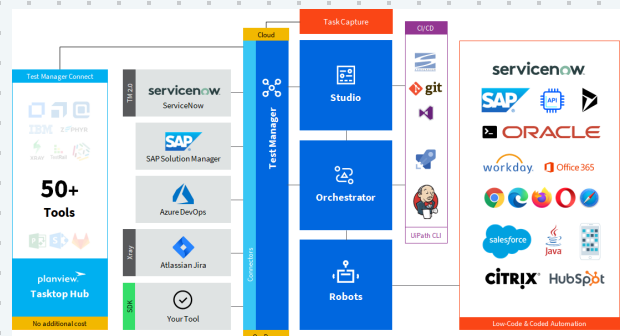

Reduce costs through consolidation of tooling, reuse of automation components, and simplified training

What capabilities are included?

Build resilient end-to-end automation

Build resilient automation for any UI/API of modern (e.g. mobile, web) and enterprise applications (e.g. SAP, Oracle)

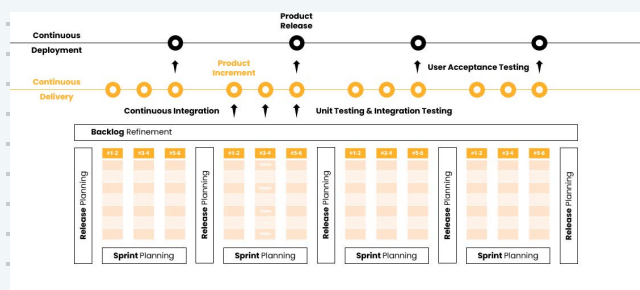

Leverage the power of Generative AI

Supercharge your testing with AI-powered tools across the entire continuous testing lifecycle

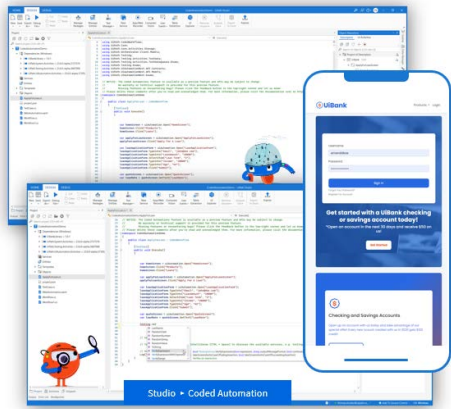

Perform continuous testing

Boost testing time with cloud-based, distributed test execution integrated into your CI/CD (DevOps) pipeline

Support migrations and upgrades

Support migrations and upgrades (e.g. SAP S/4HANA) with enterprise-grade (Veracode) testing capabilities

Get quality insights

Get valuable and actionable quality insights into your applications with comprehensive test management

PHASE 1:
Preparation

PHASE 2:
Development

PHASE 3: Data
Migration

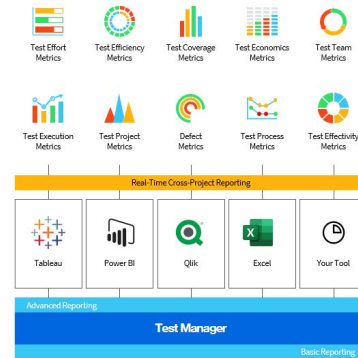

PHASE 4:
Testing

PHASE 5: Post-
Migration

Enable automation for all

Enable all roles in testing to create and maintain automations with low-code, no-code, and coding tools

How does it work?

1

Manage

Plan, monitor, and manage tests for any of your automations, applications, or environments with Test Manager

2

Automate

Build resilient automations using no-code, low-code, or coded automation capabilities in Studio

3

Distribute

Organize and schedule tests, store test data, and analyze test execution results with Orchestrator

4

Execute

Deploy test robots to execute tests on-demand, continuously, and at scale

Accelerate continuous testing with UiPath Test Suite
