# Connector Builder for UiPath Integration Service

Quickly build new API connectors to the systems you need

Add custom connectors to your next automated workflow

With **Connector Builder for UiPath Integration Service,** you can build your own custom connectors to unlock the value of third-party APIs.

Your custom connector appears automatically in the Integration Service Connector Catalog.

Share new connectors to help eliminate integration bottlenecks

Connector Builder offers a simpler way of adding and deploying native API integrations to meet integration requirements. With Connector Builder, you can:

- Create new automation connectors using any RESTful API.

- Publish and share new connectors directly to the Integration Service Connector Catalog.

- Contribute new customized connectors to the UiPath community via **UiPath Marketplace**.

When you publish a new connector, users can immediately deploy that integration for any automation use case, including those across UiPath products where Integration Service is available.

UiPath™ Studio   UiPath™ Orchestrator   UiPath™ Robots   UiPath™ Assistant

UiPath™ Studio Web   UiPath™ Apps   UiPath™ Automation Hub   UiPath™ Automation Cloud™

Connector Builder works across the UiPath platform

Who needs Connector Builder?

Technology/business partners

Deliver ready-made custom integrations to your clients—or provide connectivity to your own software applications.
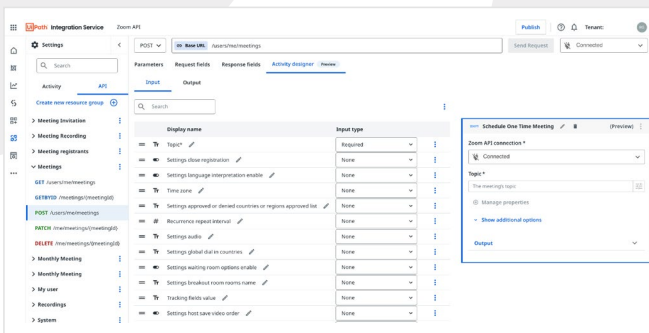

UiPath customers

Empowers business users with baisc API skills to build custom connectors within your ecosystem and expand your range of automation use cases.

Community developers

Share your application expertise by contributing connectors and solutions to UiPath Marketplace.

Configure, execute, and debug your API resources.

Start quickly, modify as needed

- Remove automation bottlenecks by creating API-based connectivity to any business system in your organization.

- Quickly fill integration gaps by adding connectors for popular Line-of-Business, IT systems, and GenAI automations.

- Deploy ready-to-use connectors that work seamlessly across UiPath products including Studio, Orchestrator, Apps, and robots.

A better configuration experience for RPA developers

- Configure and test RESTful APIs and publish them as a fully supported catalog connector.

- Import common API formats, including Swagger, YAML, and Postman collections.

- Easily add customizable activities and triggers within a single, no-code UX

- Reuse the Integration Service authentication layer that works across the product suite.

- Tap into support from multiple authentication protocols, including OAuth 2.0 Authorization Code, Client Credentials, Basic, PAT, and API-Key.

- Provides seamless integration with data models, activities and events.

UiPath Integration Service

UiPath Integration Service provides best-in-class API automation. This capability enables developers to not only accelerate automation by accessing third-party systems, but also quickly authorize and share connections across the UiPath Business Automation Platform. The Integration Service Connector Catalog comes with a large library of prebuilt integrations supporting line-of-business (LOB), GenAI, and IT system automations.

Browse our catalog of popular connectors and find more information on UiPath Integration Service.
