# UiPath™ Apps

## Turn your good ideas into automation-powered apps

With UiPath Apps, you can create dynamic user experiences that harness the efficiency and innovation of RPA and package them in an intuitive, user-friendly interface. A low-code, drag-and-drop development environment lets you turn your best ideas into compelling applications that keep pace with changing business and user requirements. You empower employees to access and use automations, and you democratize RPA with UiPath Apps

## Benefits

Broaden your RPA utilization by creating engaging experiences that simplify tedious tasks and accelerate end-user productivity.

Quick development and rapid time-to-value

Simplified adherence to compliance standards
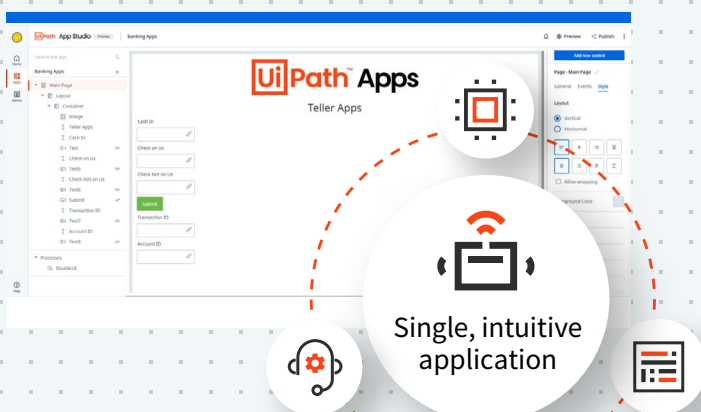

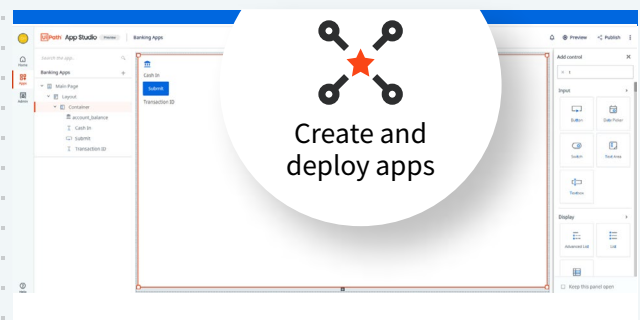

Richer, more compelling user experiences

Greater scalability and wider deployment options for automations

Improved employee satisfaction and productivity

## Low-code design studio

Create and deploy apps that put the power of RPA into the hands of more business users with UiPath App Studio. A low-code design interface simplifies the creation of apps ranging from enterprise-grade applications to simple forms that streamline processes and simplify cumbersome tasks.

Create and deploy apps

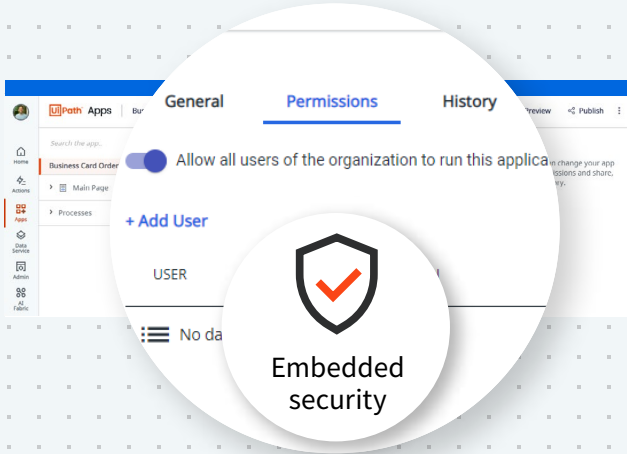

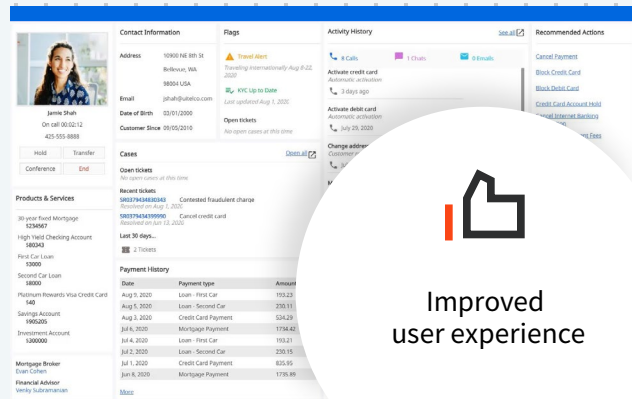

Single, intuitive application

## Integrate multiple automations and data sources

Combine existing automations in a single app and integrate data from sources throughout the enterprise—whether CRM, ERP, or legacy systems without APIs. Deliver a single, intuitive application regardless of where data originates or how many applications and automations are involved.

## A simplified, user-friendly automation interface

Improve the user experience through apps that provide an intuitive RPA interface for end-users. Create richer employee experiences by eliminating the need to switch between applications to complete tasks. Users can also access apps via any desktop, tablet, or mobile device.

Improved user experience

Embedded security

## Best-in-class governance, security, and scalability

Ensure that apps comply with regulatory and internal standards through governance features that enforce established protocols, with embedded security that protects the integrity of enterprise data sources and applications. Quickly deploy secure apps throughout the organization with a single click.

# How does it work?

## 1

### Build

Compose the app your business needs with an intuitive set of drag-and-drop controls

## 2

### Deploy

Easily test and deploy the app across your organization with the click of a button

## 3

### Use

Run automations of any kind from the app and let your robots do the work for you
