# Continuously test. Deploy with confidence.

Like the term implies, "continuous testing" is testing without interruption—anytime, everywhere, in any form. But most teams still can't build automated tests that reliably run unattended and adapt to changes–until now. With UiPath Test Suite, you can automate more and accelerate release cycles without changing the way you manage testing. The results? Faster automation, quicker execution, and less maintenance.

### Let's take a closer look at how.

### The challenge

... with finite staffing and testing resources

### Only 46%

of testing organizations have automated 50% or more of their testing.

Source: PractiTest State of Testing Report 2023

### Over 1/3

of testing leaders report facing challenges with applying test automation.

**How do you** adopt more advanced automation without changing testing processes or test management / ALM tools?

### The solution: UiPath Test Suite

Production-grade automation for testing

Test Manager Manage tests

**Studio** Automate tests

Automate testing of web and mobile apps, APIs, virtualized desktops, robotic process automation workflows, and more.

Orchestrator Distribute tests

	$\widehat{}$	
1		)

Robots Execute tests

### The features

### Automatically generate test data for data-driven testing Speed up test case creation and increase coverage

### The advantages

more test automation coverage through production-grade capabilities

75%

faster test case automation due to a low-code interface and prebuilt components

faster test execution compared to traditional test agents

50%

reduction in automation maintenance through more reliable and resilient automations

faster automation development

96% reduction in

automation downtime

### > 1.5 million

community automation experts to share knowledge and best practices

### 100s

of free prebuilt automations for managing and validating environments

### Manage testing your way

For organizations with one ALM/test management tool or distributed testing teams using their own tools

1. Connect to Test Manager Hub

2. Continue using your tools

3. Execute automated tests directly from your tools with no changes to defect reporting

#### For centralized test teams with multiple ALM/test management tools

1. Connect to Test Manager Hub 2. Use Test Manager as a centralized, aggregated solution 3. Execute automated tests from Test Manager and report defects into your existing tooling

### 60 +

lifecycle solutions compatible for integration with Test Manager using Test Manager Connect

## Integrate ALM tools with Test Manager Connect
