UiPath™ Professional Services

Overview
Advisory Services

Unlock potential, streamline processes, and maximize results every step of the way

We believe in the power of automation for everyone. And we believe in helping everyone understand and implement automation – whether you are still in the early stages of your automation journey and need guidance on how to properly establish a program, or already have a well-established automation program that you want to evolve to a higher level of maturity and business impact.

Our advisory services can help you evaluate the opportunities for improvement so that you can plan ahead, navigate operational challenges, accelerate results, and augment the value you create across the organization.

Full speed ahead with strategic business assistance

01 **Extensive experience**

We work closely with the product team to leverage the newest features and capabilities of the UiPath platform – you get the right guidance to stay ahead of industry trends.

02 **Proven frameworks & methodologies**

We incorporate leading practices to help you drive tangible business outcomes, while ensuring automation programs are structured and executed in an optimal way.

03 **End-to-end, hands-on assistance**

From establishing your automation strategy to designing and executing your program, we provide comprehensive assistance at every stage of your automation journey.

New ways of thinking build the path to a better world

Leverage our expertise on strategy, operating models, and value realization for automation programs:

Automation strategy

Establish a tailored automation strategy and execution roadmap aligned to your specific business context and key objectives.

Operational playbook design & evolution

Design and implement your optimal operating model blueprint and determine how it needs to evolve over time for full scalability and complete control.

360° program diagnostics

Our consultants can help align your overall program execution against leading practices across 5 key pillars: vision & strategy, operating model, value realization, business adoption, and technology.

How does the advisory process work?

Analysis

We conduct in-depth analysis of your current program setup, organizational priorities, challenges, needs and identify opportunities for improvement.
Strategy & roadmap

Based on the analysis, we help with establishing a tailored automation strategy and an execution roadmap to accelerate adoption and maximize the business value.

Operational planning

Our team assists with designing the optimal operational guidelines and how the different program components must evolve over time as the automation program matures.

Program execution

We can act as part of your program team and provide data-driven and experience-led decision-making support & program oversight to successfully execute the development roadmap & automation adoption plans, or elaborate analyses and ensure course-correcting measures.

Drive business excellence – and reap the rewards

By leveraging UiPath Advisory Services, you can expect to achieve significant benefits in several areas:

Resilient program strategy and execution planning

Align your automation strategy to key business objectives and successfully execute against achievable roadmaps.

Increased automation adoption

Streamline your approach for driving automation demand and adoption across business areas.

Robust governance and structure

Build a program that scales rapidly, without compromising quality or increasing exposure to risk.

Value creation and performance tracking

Capture the extended benefits of automation and have a well-defined approach for tracking and reporting on its performance.
