

AI-enabled Chatbots

Easily automate conversational processes

Delightful customer and employee experiences require great communication — UiPath combines **robotic process automation (RPA)** and **artificial intelligence (AI)** in a **chatbot interface** that connects users with the information and resources they need, using everyday language they're familiar with.

Benefits

Improved end-to-end employee and customer experience with intelligent chatbots

Chat with robots in your natural language to ask them for help

Speed up customer request processing end-to-end

Leverage Facebook, WhatsApp, WeChat, Slack, Web, SMS, and other channels

Increase employee engagement - cut repetitive work to help them focus on more valuable tasks

Deploy in a breeze - with no-code Druid AI chatbots and UiPath automation platform that connects seamlessly with enterprise systems like ERP, CRM

What features are included?

No-code open platform

Give your team the power to create user-friendly conversations in multiple languages and automate the fulfillment of frequent user requests.

Native integration of Druid chatbots with UiPath

Easily integrate Druid chatbots with UiPath Studio, Orchestrator, Attended Robots, Action Center, AI Center, Assistant, Data Service, Automation Hub

Flexible connectors

Configure enterprise applications like REST/SOAP, ERP, CRM, SQL/Autonomous, Open APIs seamlessly with UiPath automation platform

Progress to a zero-touch customer experience

Conversations in over 40 languages

Enterprise-grade security

A full complement of security features protects user privacy and the integrity of enterprise data and applications.

A scalable platform architecture

An enterprise-class multi-tenant platform supports the deployment of thousands of chatbots to accommodate sudden spikes in service demand, freeing human agents to address more complex issues.

Easy deployment and integration

Take advantage of our partnership with Druid for an out-of-the-box chatbot solution or use the chatbot technology of your choice. Seamlessly connect with any enterprise application to trigger RPA processes from chat and route specific tasks to human agents based on pre-defined rules.

How does it work?
