

UiPath Business Automation Platform

An SAP Endorsed App for accelerating digital transformation

SAP officially recognizes the UiPath Business Automation Platform as an SAP Endorsed App, part of a category of solutions from SAP's partner ecosystem that enables customers to emerge as well-run, intelligent enterprises. These endorsed apps complement and extend SAP products and deliver value with desired outcomes—quickly, easily, and with support from SAP.

It's The Foundation of Innovation™ - SAP and robots. Better together.

So, what exactly does this partnership entail?

As an SAP Endorsed App, the AI-powered UiPath Business Automation Platform works cohesively with SAP to simplify automation for accelerated digital transformation.

Equipped with the UiPath Platform for automating everything, you can rapidly innovate to future proof your business and create an intelligent enterprise.

Unlock the benefits of the UiPath-SAP partnership

- Reduce the cost and time needed to migrate your business applications to the cloud
- Easily automate business processes that span SAP and non-SAP systems
- Realize the benefits of automation in days and weeks, instead of months and years.

How does UiPath accelerate digital transformation?

Accelerate your migration to the cloud

The move to SAP S/4HANA can take on many forms—customers may be migrating to SAP in the cloud, upgrading from SAP ECC6 or SAP R/3, or performing a greenfield installation. No matter the migration type, the UiPath Business Automation Platform can play a significant role in accelerating the delivery of the project, reducing potential risks at go-live, maintaining the clean core of the resulting SAP system, and adding seamless automation to the business and IT processes that'll run on that system after go-live.

EDF Renewables achieved a **90% automation rate within five months**—a testament to the ease of use and impact of the UiPath Platform. They also **reduced costs by 70–80%** and increased their **release speed by 6x**.

In the implementation and technical migration phases, robots can scan existing custom code in the source SAP system using AI to determine compatibility with SAP S/4HANA. They can also perform remediation where necessary. Then, robots can extract data from source systems like SAP R/3 or non-SAP legacy systems, transform that data as necessary, and use AI capabilities to load it into the target SAP S/4HANA system.

Automate across all your enterprise

Automation evolves the way process-based work is completed. It drives efficiency in how businesses operate and frees up people to innovate.

Gone are the days of individual bots and point solutions—the UiPath Business Automation Platform uses a combination of UI, API, and AI-based tools to automate virtually any combination of applications across your enterprise. This means you can easily automate existing business processes and build completely new ones that span SAP and non-SAP systems.

Generali automated **1400+ processes** and saved **80M euros** between 2019-2021 with automation powered by the UiPath Platform

A simple example of how UiPath automation works is the order-to-cash process. When a customer places an order and signs a contract, the deal is marked as “closed won” in a CRM system such as salesforce.com. A robot is triggered by this event and submits the relevant data to SAP through our BAPI integration, creating a sales order before updating the status back in Salesforce.

Coca-Cola İçecek automated key aspects of their order-to-cash (O2C) process and achieved **20% Improvement** in cash flow cycle time and **30,000 hours saved**

Of course, this is one process of many, and customers are realizing the benefits of automation across the full spectrum of processes.

Saved \$24.5M by automating 15 critical SAP processes

Automated 80+ finance processes using the UiPath Platform and **saved 12,435 hours** of manual work.

E&J Gallo Winery

By automating purchases between suppliers, E. & J. Gallo Winery **saved 10,000 hours and \$500,000** in the first year.

Additionally, customizations that used to create painful technical baggage can now be moved to the automation layer maintaining the clean core of SAP. Utilizing the automation layer for customizations reduces long term TCO and provides a supportable, governable, and extensible approach.

Discover a fast and proven path to value

Realize the benefits of automation in days and weeks, instead of months and years. With prebuilt solution accelerators, you can rapidly automate common business processes to deliver technical documentation, workflows, and models together. This cuts down on discovery, design, and development time.

UiPath also provides you with access to best practices developed while building the largest automation programs in the industry. Our program has been designed based on feedback and learnings from thousands of customer engagements. Whether you are starting or scaling your automation journey, our team of experts will offer you the most comprehensive advice on a broad range of topics.

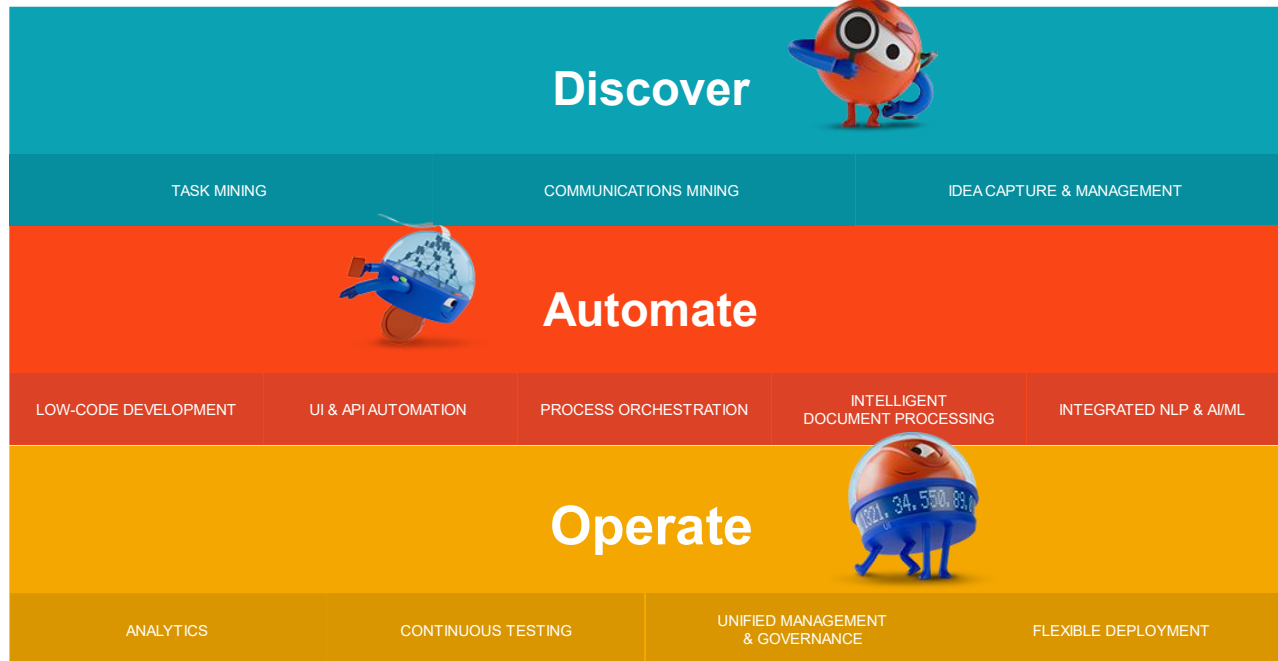

Program and technical advisory

Success planning	Program strategy & value realization	Program operations	Program discovery & democratization
Customer onboarding	Platform governance & security advisory	Platform infrastructure & maintenance assistance	Professional & citizen developer coaching
Technical health assessment	Automation program value definition	DevOps planning & implementation advisory	Automation pipeline tooling advisory
Quarterly satisfaction survey	Product roadmap & capability advisory	Code design advisory & review	Custom enablement planning
Automation program success planning	Platform strategy & design advisory	Line of business ingestion advisory	Business evangelism advisory
State of the automation program review	Automation program design & structure advisory		Automation pipeline advisory
Program health assessment	Value management advisory
