

UiPath Test Cloud for SAP: Accelerating quality with agentic testing

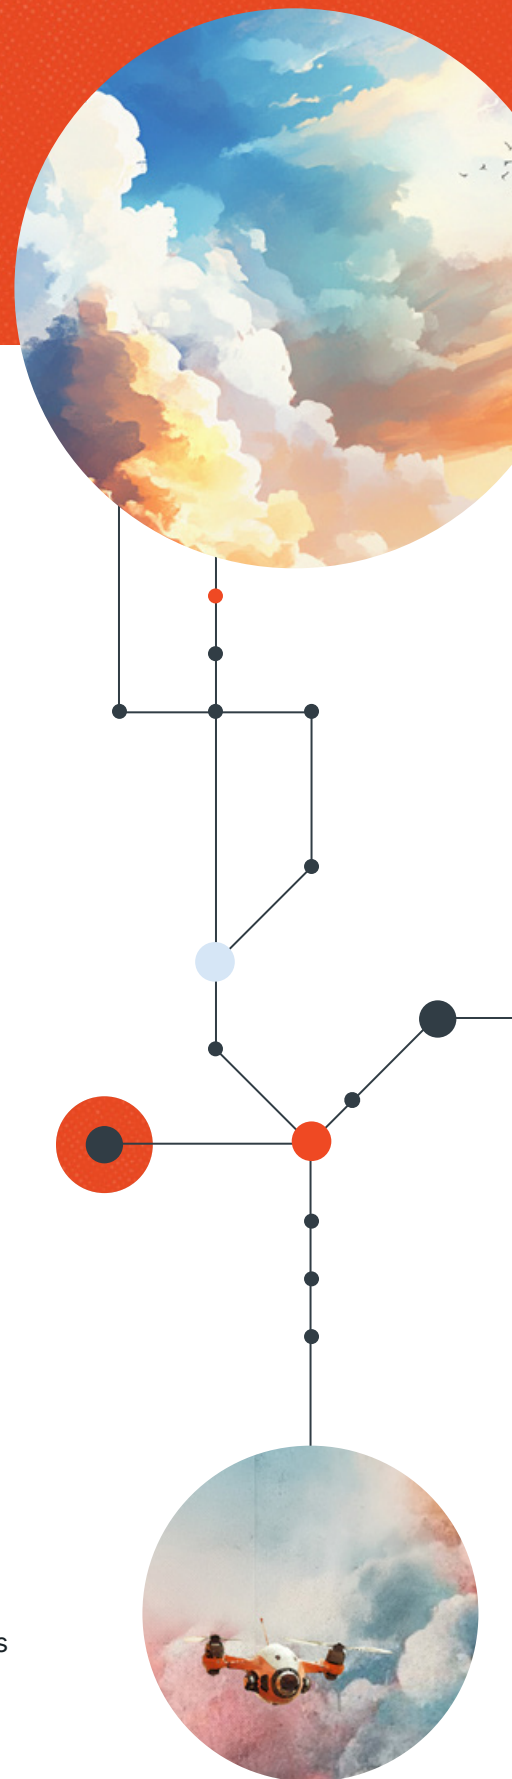

UiPath Test Cloud delivers enterprise-scale continuous testing across all SAP interfaces, enabling organizations to maintain quality while accelerating their digital transformation initiatives. Its unified approach ensures consistent testing across complex SAP landscapes while reducing strain on testing teams, simplifying migration efforts, and reducing risks.

Complete SAP coverage	Automates testing for all SAP versions and interfaces including S/4HANA, ECC, FIORI, WinGUI, WebGUI, and Business Client
Agentic testing	AI-powered capabilities throughout the testing lifecycle accelerate test creation, execution, and maintenance
Seamless integration	Connects with CI/CD tools, SAP Cloud ALM, and DevOps ecosystems for end-to-end testing workflows
Flexibility, maximized	Supports both low-code and coded automation across all SAP interfaces, enabling technical and business users alike to contribute to testing efforts
Enterprise scalability	Cloud-native architecture ensures performance and reliability for the most demanding SAP environments, supporting mission-critical business processes

Intelligent test planning with SAP heatmap & change impact analysis

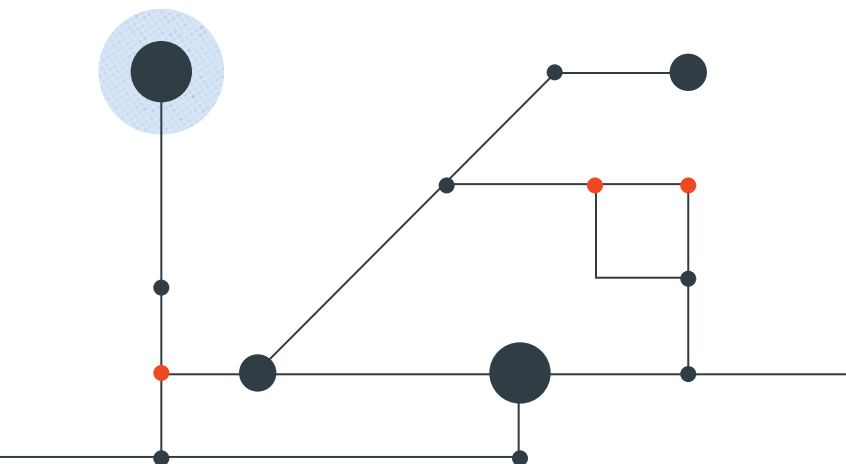

UiPath's innovative approach to SAP testing begins before a single test is written, providing unprecedented visibility into SAP processes and changes. This intelligence-driven methodology helps teams focus on their testing efforts where they matter most, eliminating wasted effort and ensuring critical business processes remain stable.

- **SAP Heatmap:** Connects to production SAP systems to visualize real-time process insights based on actual usage patterns
- **Change Impact Analysis:** AI-powered analysis of SAP transports identifies affected business processes, focusing testing efforts where they matter most
- **Test Gap Analysis:** Identifies missing test coverage for critical SAP processes to prioritize automation efforts

2

- **Generate test cases:** Automatically creates test cases for SAP transactions directly from requirements or SAP Heatmap data
- **Low-code automation:** Enables both technical and business users to build and maintain SAP test automation
- **Self-healing tests:** Adapts to UI changes in SAP interfaces, reducing maintenance overhead
- **Test data management:** Creates realistic test data on demand with custom SAP Test Data Agents

By combining AI, cloud scalability, and automation, UiPath helps SAP users redefine continuous testing for the digital age. UiPath Test Cloud helps organizations deliver innovation and reliability at scale, maximizing their SAP investments while minimizing risk and technical debt.
