

Enhance Distance Learning with Remote Computer Access

Best value remote desktop and remote support solutions for students, faculty, and IT

Students can access lab computers remotely, faculty can work from home, and IT can remotely support any device

Trusted by Educational Institutions Worldwide for their Remote Access Needs

“A lot of students buy \$200 laptops. When you’re doing a CAD drawing, it’s not really going to work for you. We have iMac Pros in the college labs and the students are able to remote in and everything works for them. Luckily Splashtop supports Chromebooks since the college has been lending out Chromebooks to students who don’t have computers or can’t afford them. You’re going to have a lot more people from Wayne State coming to you for Splashtop because they’ve been watching us. It just works.”

- Gary Cendrowski, Director of Technology & Chris Gilbert, Application Technical Analyst, The College of Fine, Performing, and Communication Arts at Wayne State University

Splashtop Features

High Performance

Centralized Admin Console

Easy Deployment & Scalability

In-session Features

High Security

Splashtop Solutions for Remote Learning

Remote Labs

Students can remotely access lab computers from any device

Students can continue learning from home by:

- Remoting into their on-campus lab computers to access desktop software applications like SolidWorks, Adobe, Revit, AutoCAD, and many more
- Accessing computers with specialized hardware to create and edit videos, animations, models, designs, VFX, graphics and more
- Using personal devices like Chromebooks and iPads to leverage the processing and computer power of lab computers
