

# Sygyic – Twisty route

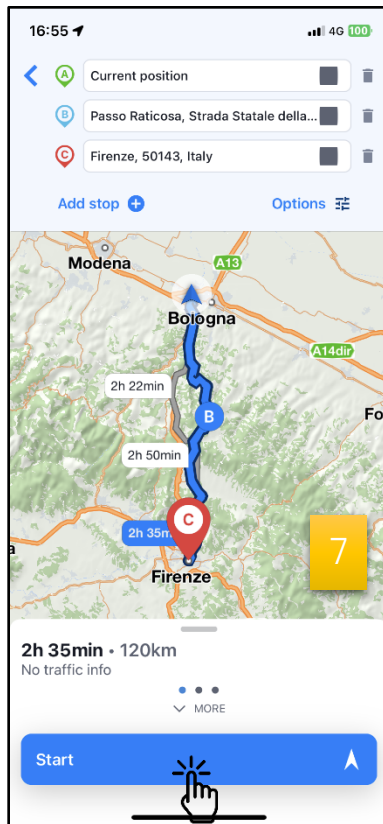

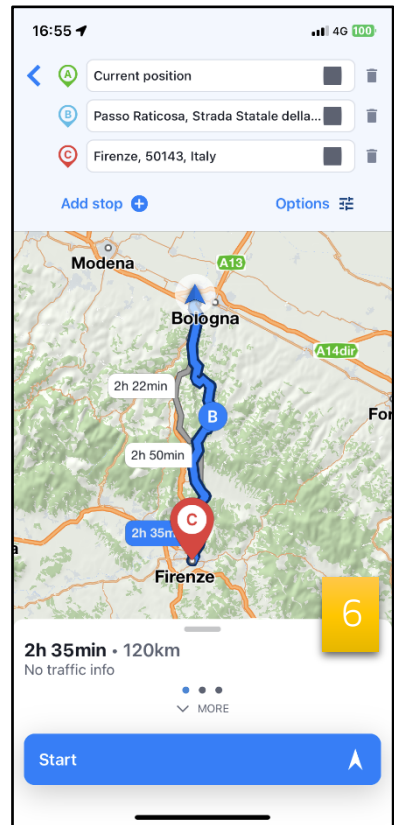

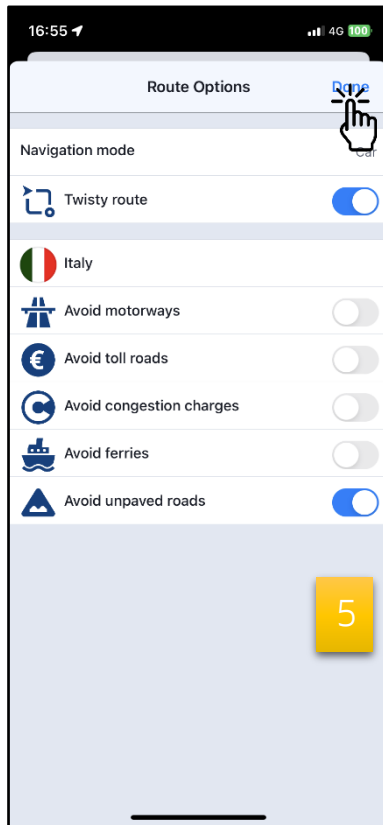

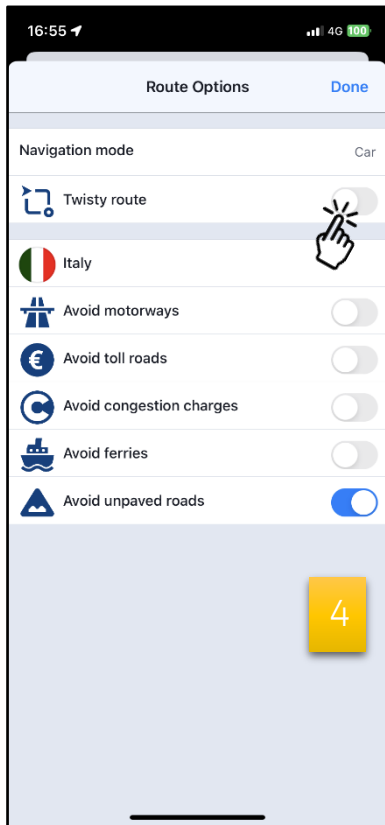

The following guide is valid for both **Android** and **iOS** operating systems.

It is possible to enable this function on both phone and cluster side.

## 1. Enabling Twisty route on phone side

1. Open **Sygyic GPS Navigation & Maps** on your smartphone;
2. Create a route in the Sygyic app (see this tutorial "[Starting the route](#)" for more details);
3. Tap on "Options";
4. Enable the "Twisty route" option;
5. Tap on "Done";
6. Sygyic's algorithm will recalculate your route and show you a more twisty route;
7. Tap on "Start" to start your itinerary;
8. If you want to see the route on the cluster: launch **Ducati Connect** and the itinerary will be displayed within the **Sygyic** virtual app.

## 2. Enabling Twisty route on cluster side

1. Launch **Ducati Connect** on your smartphone (Note: you have to pair your smartphone and the cluster via Bluetooth first);
2. Wait for the completion of the connection procedure;
3. On the main screen of the cluster, tap on "Ducati Connect";
4. Open the **Sygic** virtual app;
5. Search for a route or open a previously saved route;
6. Tap on "Get directions";
7. Tap on the options symbol ;
8. Enable the "Twisty route" option;
9. Sygic's algorithm will recalculate your route and show you a more twisty route;
10. Go back (Note: you can either tap on the "back arrow" or long press to the left the multicontroller placed on the handlebar)
11. Tap on "Start" to start your itinerary.
