

CYGNA AUDITOR

Complete visibility to protect and prove compliance across on prem, hybrid and multi-cloud environments

Cygn Auditor is a comprehensive, integrated auditing, alerting, and reporting platform that provides insight for your organization’s key infrastructure. Issues can result in costly service disruptions and business-crippling downtime. Data breaches and non-compliance with SOX, PCI, HIPAA, GDPR or other regulations can cause you to incur significant expenses as well. You need a solution that ensures you are notified in real time of critical changes. Leverage Cygn Auditor to maintain security and prove compliance.

Comprehensive change auditing

Cygn Auditor captures changes to your key infrastructure with the who, what, when and where details with pre and post values. This provides you the information to act immediately to minimize the security impact or system availability.

Deployment & scalability

Cygn Auditor provides the ability to manage and deploy from a centralized web management console with flexible storage. It has been built from the ground up to excel from small to exceptionally large environments.

Role-based access control with scoping

Simple access permission configuration with reader, contributor, and owner roles for every source. This allows users to only have the necessary rights to perform their jobs. Scoping ensures they can only work with the data they are allowed to see.

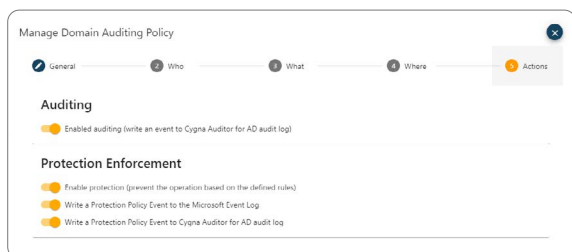

Customer quote:

Large retailer: “Our team had to spend a couple of days every quarter to gather info and produce compliance reports for the auditors. With Cygn Auditor we have scheduled reports automatically sent by email. We can also quickly create a query and report for any additional auditor asks. It saves us a lot of time and effort so we can focus on our day-to-day activities.”

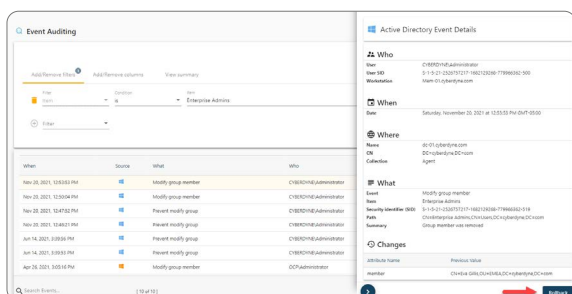

Protection

Protect against changes to critical Active Directory objects by stopping them in their tracks, such as Enterprise Admins group membership changes, accidental deletion of OUs and GPOs.

Rollback changes

Undo changes that should not have been made in the first place whether unauthorized or unintentional. Simply rollback objects or attribute values in a few simple mouse clicks with Cygna Recovery for AD integration.

Real-time alerts

Get notified in real-time of critical changes that may require immediate attention. Alerts can be sent to email, event log, Teams and or to SIEM systems.

Centralized web-based management console

Get notified in real-time of critical changes that may require immediate attention. Alerts can be sent to email, event log, Teams and or to SIEM systems.
