CYGNA AUDITOR FOR AZURE AD

Complete visibility into what's happening in Microsoft Azure Active Directory

Azure Active Directory (Azure AD) is Microsoft's cloud identity and access management service that is used to allow users to sign in and access cloud resources such as Microsoft 365, the Azure portal or other cloud based apps that can also contain external B2B or B2C users. Azure AD issues can result in costly service disruptions and business-crippling downtime or even unwanted access.

Comprehensive change auditing

Cygna Auditor for Azure Active Directory captures the details of all changes made to your tenant(s), including who made the change, when the change was made, and what changed with the pre and post values. This provides you the information to act immediately to minimize the security impact or unwanted activity.

Track role changes

Roles can be used to control access and secure resources in much the same way as groups so monitoring them is critical. Cygna Auditor for Azure AD reports on role membership changes. Changes to role definitions and scope are also captured.

Detailed logon tracking and risky sign-ins

Monitor Azure AD for compliance and security by analyzing user and admin sign-ins. Security reports on both successful and failed attempts to access your Azure AD and cloud applications. Cygna Auditor for Azure AD also reports back on sign-in attempts from risky or anonymous IP addresses.

Customer quote:

Manufacturer: "We are a hybrid shop and use a combination of synced and cloud only identities for our core apps in Azure. To troubleshoot and monitor changes, we had to go to many different portals and consoles to get the data and sometimes it was no longer even available. Cygna Auditor gives us all the events in one screen and now we decide how long to keep them in our own database. This is a huge improvement for us in both time and effort."
CYGNA LABS

Plain language events

Cygna Auditor provides concise events in plain language making it easier to understand for all users.
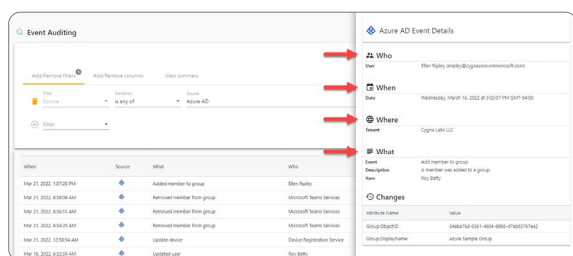

Reporting

Generate comprehensive reports with built-in or custom reports for best practices and regulatory compliance mandates such as GDPR, SOX, PCI-DSS, HIPAA, FISMA, GLBA and more.

Real-time alerts

Get notified in real-time of critical changes that may require immediate attention. Alerts can be sent to email, event log, Teams and or to SIEM systems.

Centralized web-based management console

Search from anywhere using a web browser, no need for an installed console. Query and report across on prem, hybrid and multi-cloud environments with a simple to use interface.
