

# CYGNA AUDITOR FOR VMWARE

## Complete visibility into activity on changes to VMware

VMware is the foundation of your virtualization infrastructure that runs your mission critical systems. To make sure everything runs smoothly and securely, you need to know what is happening. Cygna Auditor for VMware tracks all changes helping you to ensure the security, compliance, and control of VMware.

### Comprehensive change auditing

Cygna Auditor for VMware detects changes to your critical virtualization infrastructure with the who, what, when and where details with pre and post values. This provides you the information to act immediately to minimize the security impact or system availability.

### Deployment and scalability

Cygna Auditor for VMware provides the ability to manage and deploy from a centralized web management console with flexible storage. It has been built from the ground up to excel from small to exceptionally large environments.

### Role-based access control with scoping

Simple access permission configuration with reader, contributor, and owner roles for every source. This allows users to only have the necessary rights to perform their jobs. Scoping ensures they can only work with the data they are allowed to see.

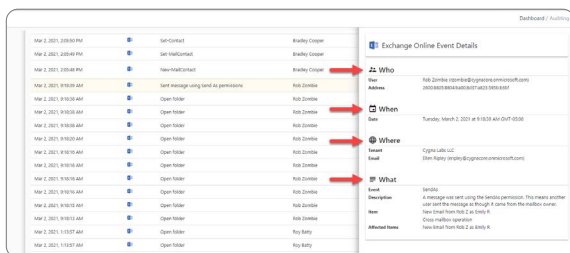

#### Customer quote:

Educational Institution: "We use VMware in our datacenter for all our student, faculty, and research infrastructure. Its critical for us to know what's happening in VMware to keep all those systems up and secure. We also really like that we can see and report on AD, M365 and VMware all in one screen, saves our team a lot of time."

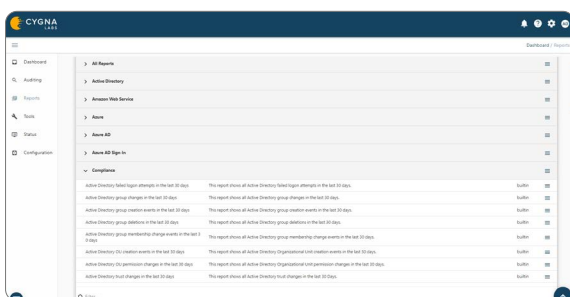

## Plain language events

Cynga Auditor provides concise events in plain language making it easier to understand for all users.

## Reporting

Generate comprehensive reports with built-in or custom reports for best practices and regulatory compliance mandates such as GDPR, SOX, PCI-DSS, HIPAA, FISMA, GLBA and more.

## Real-time alerts

Get notified in real-time of critical changes that may require immediate attention. Alerts can be sent to email, event log, Teams and or to SIEM systems.

## Centralized web-based management console

Search from anywhere using a web browser, no need for an installed console. Query and report across on prem, hybrid and multi-cloud environments with a simple to use interface.
