# CYGNA AUDITOR FOR WINDOWS FILE SYSTEM

Complete visibility into activity on shares, folders, files & permissions

Windows file servers are treasure troves of all sorts of sensitive data which makes them high value targets for bad actors. Auditor for Windows File System enables organizations to protect critical business resources and intellectual property by tightening security and control over Windows file systems.

Real-time file, folder and share auditing

Cygna Auditor for Windows File System monitors and audits Windows file system changes in real-time. Track who did what, when and where for each change that was made. Keep track to protect your important intellectual property and sensitive information.

Deployment and scalability

Cygna Auditor for Windows File System provides the ability to manage and deploy from a centralized web management console with flexible storage. It has been built from the ground up to excel from small to exceptionally large environments.

Role based access control with scoping

Simple access permission configuration with reader, contributor, and owner roles for every source. This allows users to only have the necessary rights to perform their jobs. Scoping ensures they can only work with the data they are allowed to see.

Customer quote:

Healthcare Provider: "We need to safeguard patient Protected Health Information (PHI) and prove that it stays that way for HIPAA compliance. We use Cygna Auditor to create reports for auditors and alert on permission changes for file shares that contain EHRs. Alerts allow us to immediately fix permission changes that do not follow our policies and reports demonstrate to the auditors that we know and track what is happening."
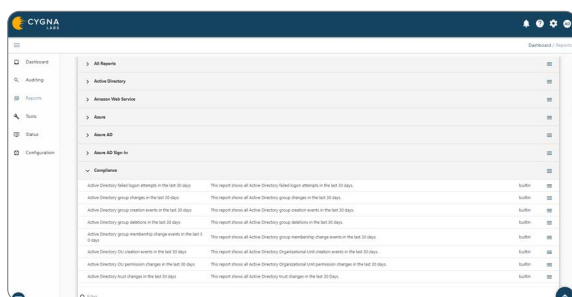

CYGNA LABS

Plain language events

Cygna Auditor provides concise events in plain language making it easier to understand for all users.
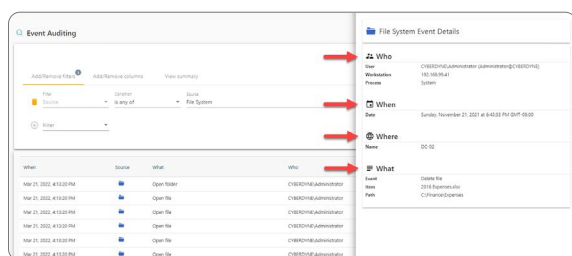

Reporting

Generate comprehensive reports with built-in or custom reports for best practices and regulatory compliance mandates such as GDPR, SOX, PCI-DSS, HIPAA, FISMA, GLBA and more.

Real-time alerts

Get notified in real-time of critical changes that may require immediate attention. Alerts can be sent to email, event log, Teams and or to SIEM systems.

Centralized web-based management console

Search from anywhere using a web browser, no need for an installed console. Query and report across on prem, hybrid and multi-cloud environments with a simple to use interface.
