

Vesuvius & Foseco at a Glance

Wherever metals flow in the world, Vesuvius and Foseco are recognized as the embodiment of highest performance and profitability.

Vesuvius is a global leader in metal flow engineering, providing a full range of engineering services and solutions to its customers worldwide, principally serving the non ferrous and ferrous foundry industries.

Foseco as a brand of the Vesuvius Group is at the leading edge of industry efforts to improve the metallurgical performance

of castings. Foseco is offering a package of consumables and equipment for the production of clean, reproducible metal quality in a range of non ferrous and ferrous alloys.

VESUVIUS TODAY

- Present in 38 countries on 6 continents
- 66 Manufacturing sites
- 17 R&D Centres
- 91 Sales offices
- More than 10.800 employees worldwide

The foundry process is highly sequential and critically dependent on consistency of product quality and productivity optimisation. The conditioning of molten metal, the nature of the mould used and the design of the way metal flows into the mould are key parameters in a foundry.

Turning innovation into results

The products and associated services of Foseco to foundries improve these parameters. The solutions related to the non ferrous foundries are crucibles, metal treatment and degassing systems, filters, feeding systems and environmentally friendly binders and coatings.

The improvement of these products and the creation of new solutions are in the focus of the global research and development of Vesuvius.
