

11

This AGM notes that the world is experiencing a climate crisis, that food and agriculture represents a large percentage of Green House Gas (GHG) emissions and is a leading cause of biodiversity loss globally. Furthermore, the stability of food supply chains, and the livelihoods of farmers and growers are under threat by increasingly erratic weather patterns, caused by climate change and also challenges of biodiversity loss, soil health and water supply.

This AGM supports the Future of Food 2030 framework launched in September 2018 and applauds the achievement of meeting our GHG target 3 years early and the progress made on responsible sourcing to date.

To ensure a natural environment we are proud to pass on to future generations, this AGM calls upon the Board to accelerate action to mitigate and reduce the impacts of the Co-op on the natural world.

This AGM calls upon the Board to:

- Pursue ambitious science based plans for direct and indirect carbon and GHG emission reduction.
 - Publish plans for the responsible sourcing of key ingredients and resources used across the Co-op.
 - Promote and develop digital tools that measure the environmental and ecological footprints of our Co-op products.
 - Work with respected partners on key projects to restore nature in agricultural supply chains.
 - Support the call on international governments for a 'Global Deal for Nature and People' to reverse nature's decline by 2030.
-
