

# Commercial Sustainability: Facilities & Campuses

What you can't see can  
make all the difference.

Sustainability is the invisible rope pulling data centers and technology manufacturing facilities into the future. Power, water and environmental resources are critical to building and maintaining reliable facilities.

Black & Veatch makes the invisible invaluable by providing solutions for data centers that help our clients build resilient, sustainable facilities and achieve optimal long-term efficiency goals.

**BLACK & VEATCH**

### Benchmark

Analyze current facility infrastructure performance and carbon footprint (i.e. emissions, energy efficiency, water use, waste, etc.) against goals, regulations and societal.

### Roadmap

Build a plan to implement sustainable solutions needed to achieve required performance metrics, including schedule and budget.

### Engineering & Design

Deliver architectural, civil, structural, electrical and mechanical services to achieve sustainable design by applying passive and net-zero practices with Envision and LEED-certified principles.

### Construction

Construction and construction management services using sustainable sourcing, material handling and recovery techniques.

## Start Here On Your Path to Sustainability

For corporate real estate professionals and facility managers charged with implementing sustainable solutions, it's essential to have a fundamental understanding of alternatives for efficient water and power use and environmental practices. As your partner, we can help you align stakeholder expectations and objectives with the right technology. Whether you are in the process of exploring, benchmarking or executing your program, Black & Veatch can help your company meet both its business and sustainability goals.
