## The Back-Office Workflow

# From Order Creation to Payment

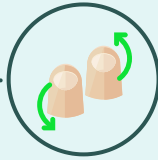

### 1 Taking the Order

Sales Orders can come from an existing ERP, website, mobile sales staff, csv imports or directly entered into the system. The price and tax of items is automated, based on your pricing strategy.

### 2 Picking

Pick operation can be completed with a single click. Options such as bulk-pick & skip-pack can further improve efficiency. **Reduce errors through stock control and pre-population of data.**

### 4 Planning

**Drag-and-drop functionality** with visual cues and enforcement prevents errors. Can plan orders even before they are picked/packed to prevent delay.

### 3 Packing

Pack items individually or create containers and pack in them. **Packed orders automatically show up on driver's hand-held on the scheduled date.**

### 5 Loading

Directly create load orders from packed orders with a single click.. Drivers can submit load orders as well. **Whatever be your process, we support it.**

### 6 Monitoring

Route Monitor gives you complete visibility into what is happening on the go. Vehicle location, loading status, site summary and POD's are recalled in real-time.

### 7 Invoicing

Invoices are generated based on **your** rules; Review, edit and send them manually or have them automated. **All data flows seamlessly, improving cash flow & reducing errors.**

### 9 Historical data & Analytics

All data history records for customers, orders, drivers is available at your finger tips. Never worry about missing paper-work, rather **focus on growth using the analytics capabilities.**

### 8 Payments

Collect cash/cheque/credit card payments as per your preference (through mobile worker or back-office processing).
