Colour contrast

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

Sufficient colour contrast on images with elements such as logotypes

- Text and interface elements need to be clear and readable for users with vision impairments
- If pictorial logos or logotype is displayed over an image, the logo and any image of text must maintain a minimum contrast ratio of 3:1 with the background to ensure readability. Use a contrast analyzer ([e.g. free Adobe Web Tool](#)) if you want to test a certain contrast ratio.
- Graphical elements used purely for decoration are not subject to contrast requirements

Examples

✗ Contrast too low

○ Ok

Logotype on images

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

Where technologies support the intended visual presentation, text should be used to convey information instead of using images of text — except in the following situations:

Customizable

- The image of text can be visually customized to the user's requirements (Change the language, enlarge the text size, spacing etc.)

Essential

- Logotypes (text that is part of a logo or brand name, except small text) are considered essential.

Logotype in assets: Do's

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

○ Pure Image

○ Sufficient colour contrast between logo and image

✗ Complicated background with insufficient colour contrast between logo and image leads to poor readability

Avoid duplicated text/image content

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

Avoid duplicated content that does not enhance clarity or support user comprehension. Texts on images can't be customized, text should only be used in the respective text section next to the image (and not duplicated).

Avoid static text/mottos on images

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

Essential

Text contained within a logo or brand name is permitted and does not need to meet this requirement.

Customizable

Text is not available for user to be visually customized, and should be avoided within images.

Avoid static text/mottos on images

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

✗ Text is placed on the image, not available to customize

Must have: alternative text for images/videos

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

- For all images there will be an alternative text applied describing the content, in the language of each market
- Important note for partners: there is no need to provide these alternative texts to ZMS, the descriptions will be automated in the near future.

Example for alternative text

1 adult wearing clothing from the fashion brand XYZ...

Must have: video captions

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

- For all videos, captions need to be added to provide essential audio information in the language of each market. This includes dialogue, speaker identification, and relevant non-speech sounds such as sounds effects.
- Important note for partners: there is no need to provide captions to ZMS, the captions will be automated in the near future.

Video example with captions

Avoid motion/video flashing

General guidelines for images and videos in accordance with the European Accessibility Act (EAA)

- Videos and animated images should not flash more than 3 times in any 1 second period, unless the flash is below the general flash and red flash thresholds.

Examples

Ok

Too many flashes

second period)
