

## Product Engineer at Nomad Health

### **What is Nomad?**

Nomad is a revolutionary, tech-driven platform that is simplifying healthcare staffing. We are building a marketplace that enables clinicians and the institutions that hire them to find each other and transact directly, without a broker. Nomad cuts out mountains of paperwork, faxes, and phone calls, and moves everything online. It makes staffing faster, more transparent, and substantially less expensive. Nomad is simple, modern healthcare staffing.

Nomad is launching in the temporary physician staffing market and will quickly grow to include the temporary nursing and allied health provider markets. All together, these represent a \$15 billion - and growing - market. Nomad further plans to expand into other areas, including telemedicine staffing, permanent position staffing, and credentialing services.

At Nomad, you'll have a front row seat at an early stage startup that is shaking up healthcare. And you'll have the chance to make a deep impact on Nomad's business and drive the future success of the company.

### **What will you do at Nomad?**

- Work closely with a small, dynamic team to build product and platform features and improve the performance and experience of Nomad
- Define and implement best practices for clean, extensible code, and own the architecture, frameworks, and toolkits used to build and maintain the product
- As a key early member of the team, you will influence the long-term evolution of web technology for the world's first tech-driven healthcare staffing platform

### **What we're looking for**

- Expertise building reliable, high-performance web applications in JavaScript, both with libraries like React/Redux and in pure JavaScript
- Full-stack development experience in Python, Ruby, PHP, or a similar language.

- A deep understanding of databases and caching, API design and consumption, and third-party software integration
- A strong drive to bring new products and ideas to market quickly, a willingness to experiment and take risks, and a desire to work in a tight-knit, dynamic, collaborative environment
- Experience building native mobile apps or using libraries like React Native is a plus

### **Technologies we use**

- Flask on Python 2.7 backed by MongoDB, Redis, Nose
- React/Redux, Sass, Yarn, Webpack, Jest
- Git/GitHub, CircleCI, Heroku, AWS
- Our team works with macOS on MacBook Pros

### **How to apply**
