SR. PRODUCT MANAGER at Nomad Health in Charlotte, NC

What is Nomad?

Nomad is a revolutionary, tech-driven platform that is simplifying healthcare staffing. We are building a marketplace that enables clinicians and the institutions that hire them to find each other and transact directly, without a broker. Nomad cuts out mountains of paperwork, faxes, and phone calls, and moves everything online. It makes staffing faster, more transparent, and substantially less expensive.

At Nomad, you'll have a front row seat at an early stage startup that is shaking up healthcare staffing, a $20 billion plus market. And you'll have the chance to have a deep impact on Nomad's business and drive the future success of the company.

What will you do at Nomad?

- As Product Manager, you will bring your creativity, intelligence, technical, and product skills to focus the team on adding value throughout the product life cycle.
- Working with your design and engineering counterparts, you'll play a leading role in defining, designing and bringing to life the Nomad product for your area.
- You will conduct market and user research, test, and analyze data to identify problems and opportunities.
- You will collaborate with internal stakeholders to prioritize key problems to solve.
- You will define epics and the roadmap for your product area.
- You will lead your scrum team and drive the process to deliver product epics according to Agile methodologies, while motivating your team to deliver their best.
- You will nourish a collaborative environment by encouraging the sharing of ideas and openness to feedback, learning, and iteration.
- You will put in place and track success with metrics and data.
- Reporting directly to the VP of Product, this position will work out of our North Carolina office.

What we're looking for:

- 5+ years of experience in a Product Management role, working directly with engineering and design.
- In depth understanding of Product Management process.
- Experience and knowledge of SaaS products in a marketplace, B to C or B to B context.
- Ability to define and conduct user research, analyze markets and competition.
- Experience working in Agile environments, particularly scrum.
- Strong communication skills to foster cross-team and cross-office collaboration.
- Experience working in a fast-paced, dynamic environment with ability to work autonomously.
- Passion for metrics and data-driven decision making for product improvements and measuring success.
- Business and/or Computer Science degree, preferred.

Additional Preferred Qualifications
- Experimentation, and particularly A/B testing experience.
- Product Management and Agile certifications and/or courses.
- Mobile apps experience
- Experience with healthcare systems or labor marketplaces.

How to Apply:
