

Product Summary

Alerts

Our in-app Alerts feature allows you to set and share critical information that needs immediate attention. Improve your alerting capabilities with simple alert set up.

Always on 24/7 monitoring

- ✓ Always-On Monitoring for Critical Infrastructure
- ✓ Simplified Data Pipeline and Alert Integration
- ✓ Shareable, Actionable Insights for Faster Time-to-Resolution

Fastly Alerts allow customers to configure custom notifications directly within the Fastly interface or API, removing the need for external alerting tools. With support for real-time triggers, historical metrics, and webhook integrations (e.g., Slack, PagerDuty), customers can ensure rapid issue detection and resolution.

Always-On Monitoring for Critical Infrastructure

- Enable your teams with real-time, automated notification systems that ensure uninterrupted service quality.

Simplified Data Pipeline and Alert Integration

- Simplify alerting pipelines across deliveries, origins, domains, and compute layers directly through Fastly's intuitive interface or API.

Shareable, Actionable Insights for Faster Time-to-Resolution

- Collaborate effectively with actionable alert insights and integrations across your preferred tools like Slack and PagerDuty for streamlined resolutions.
