

# Fanout

Fastly Fanout is the push platform built on open technology that gives your API real-time superpowers.

## Push real-time data to any devices, anywhere.

- ✓ Build and Scale Real-Time Messaging Easily
- ✓ Simplify Real-Time Functionality with Existing API Stacks
- ✓ Lower Costs and Scale Faster

Fanout integrates seamlessly with your existing API stack, enabling real-time capabilities such as WebSockets, HTTP streaming, and server-sent events. It empowers developers to push data directly to devices without needing to manage a complex push infrastructure.

### Build and Scale Real-Time Messaging Easily

- Empower developers to build responsive, scalable real-time messaging apps with Fanout's seamless edge push capability.

### Simplify Real-Time Functionality with Existing API Stacks

- Push live updates to applications instantly using Fanout's API integration and reduce the complexity of adding real-time capability to APIs without custom servers.

### Lower Costs and Scale Faster

- Deliver exceptional real-time scalability while saving costs with efficient and straightforward push mechanisms using the Fastly platform.
