

Fastly Edge Cloud Platform

Powering the best of the internet

The Fastly Edge Cloud Platform ensures your websites, applications, and services are able to scale and meet the demand of your users, are delivered securely, and as fast as possible. Our modern network is designed to give you a competitive edge with built-in security, so you can deliver content quickly and confidently. If you run applications on AWS Cloud, this results in reduced downtime, increased speed, enhanced security and superior digital experiences for your consumers.

Network Services

Fastly Network Services deliver more than just a CDN. Our modern architecture and infrastructure will improve the performance of your site, scale the impact of your DevOps and SecOps teams, and save you money all at the same time.

Security

The Fastly Next-Gen WAF (powered by Signal Sciences) is the only web application firewall that can protect your websites, apps, and APIs everywhere from one unified solution. 90% of customers use it in blocking mode.

Compute

Fastly's Compute offering allows you to build high scale, globally distributed applications and execute code at the edge — without having to manage the underlying infrastructure.

Observability

Developers need powerful and intuitive observability functions that quickly diagnose issues to maintain uptime and performance. Fastly's Observability products help you track and ensure the health of your applications to meet your business objectives.

Integrate Fastly with AWS to enhance your cloud native services with empowering features

Seamless delivery & trusted protection

- Fastly easily integrates with AWS to enhance cloud native services, helping exceed the demand for fast, secure and highly personalized experiences
- Fastly's edge cloud platform sits in front of a customer's AWS origin to help deliver content closer to end users, at the edge of the internet, enhancing web and app performance

Simplified cloud migrations with less downtime risk

- Any amount of downtime can mean serious financial implications. With Fastly's Layer 7 load balancer, customers feel confident in their cloud migration efforts to AWS Cloud
- Unlike DNS-based solutions, Fastly CDN provide immediate and granular control while eliminating additional network hops or points of failure
- Reliable service Integration with services such as AWS Lambda and Amazon S3 to allow organizations to quickly troubleshoot issues, eliminate application downtime, and simplify application management.

Unified web app & API security, anywhere

- Fastly Next-Gen WAF protects cloud applications against: -Layer 7 attacks -OWASP top 10 -Account Takeover (ATO) -API abuse/misuse -Bot attacks
- Fastly's Next-Gen WAF on the AWS Cloud helps strengthen cloud security posture efforts so you can focus on risk management and scaling your business
- Fastly Next-Gen WAF leverages the AWS Lambda service to quickly and confidently allow or fully block traffic after an API event inspection with little effort to block attacks.

Real-time logging & user-friendly dashboard

- Fastly supports streaming its logs to Amazon S3, enabling businesses to stream real-time logs and analyze unlimited amounts of edge data, without adding any latency through a user-friendly dashboard.
- Get actionable insights to help mitigate interruptions to your end-user when issues arise or configuration changes are made.
