

3rd grade reading proficiency is associated with more positive health outcomes throughout one's life.

Sources: CO Equity Compass; CO Dept. of Education

2023

Lake County 3rd graders had the lowest reading proficiency rate in CO.

2024

The percentage of local 3rd graders meeting state standards more than **DOUBLED**, dramatically narrowing the gap vs state average.

WHAT IT MEANS

District Size Matters

Lake County is such a small district that just 3 students moving from below to at grade level can cause a 5 percentage point swing! In a larger district like Eagle County, you'd have to see a change in 18 students' scores to have the same impact.

A Little Bit Makes a Big Difference

Even a small bit of support can make a big impact - not just for an individual student, but for the district as a whole. It's more critical than ever that our students have both high-quality instruction and meaningful learning beyond classroom walls to help move the needle & close the gap.
