* = The All-Electric MINI Cooper is a battery electric vehicle requiring mains electricity for charging. Whilst we recommend the battery for this vehicle is charged to 80% to help optimise the life of your battery, the electric range figure shown is the WLTP figure after the battery had been fully charged to 100%. WLTP figures are shown for comparability purposes. Only compare fuel consumption, CO₂ and electric range figures with other cars tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the starting charge of the battery, accessories fitted (post registration), variations in weather, driving styles and vehicle load.
