Official Fuel Economy Figures for the MINI Electric: Electric energy consumption (weighted): 3.9–4.1 miles/kWh (15.8–15.2 kWh/100 km). CO<sub>2</sub> emissions: 0 g/km. Pure Electric Range: 140–145 miles. These figures were obtained after the battery had been fully charged. The MINI Electric is a battery electric vehicle requiring mains electricity for charging. There is a new test for fuel consumption, CO<sub>2</sub> and electric range figures. The electric range shown was achieved using the new test procedure. These figures may not reflect real life driving results, which will depend upon a number of factors including the starting charge of the battery, accessories fitted (post-registration), variations in weather, driving styles and vehicle load. # MINI MOTABILITY.

[www.mini.co.uk/motability](http://www.mini.co.uk/motability)

Official Fuel Economy Figures for the MINI range (excluding the MINI Electric): Fuel consumption (combined): 38.7 – 52.3 mpg (7.3 – 5.4 l/100km). CO<sub>2</sub> emissions: 167 – 122 g/km. Figures shown are for comparability purposes; only compare fuel consumption and CO<sub>2</sub> figures with other cars tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the accessories fitted (post-registration), variations in weather, driving styles and vehicle load. The CO<sub>2</sub> figures shown have been determined according to the WLTP test. WLTP has been used as the applicable CO<sub>2</sub> figure from 1 April 2020 for first year vehicle tax (VED) and from 6 April 2020 for company car tax (BIK). The CO<sub>2</sub> figures were previously based on the NEDC equivalent.

The models shown on this brochure feature both standard and optional equipment. For more information, please contact your local MINI Centre. Subject to changes in design and equipment. Information valid for vehicles from April 2022 production.
